Across The Universe:

Quantum Leap: From Dirac And Feynman, Across The Universe, To Human Body And Mind Vladimir G Ivancevic, Tijana T Ivancevic, 2008-10-09 This is a unique 21st century monograph that reveals a basic yet deep understanding of the universe as well as the human mind and body all from the perspective of quantum mechanics and quantum field theory This book starts with both non mathematical and mathematical preliminaries It presents the basics of both non relativistic and relativistic quantum mechanics and introduces Feynman path integrals and their application to quantum fields and string theory as well as some non quantum applications It then describes the quantum universe in the form of loop quantum gravity and quantum cosmology Lastly the book turns to the human body and mind applying quantum theory to electro muscular stimulation and consciousness It can be used as a graduate or advanced undergraduate textbook for a two semester course in quantum physics and its modern applications Some parts of the book can also be used by engineers biologists psychologists and computer scientists as well as applied mathematicians both in industry and academia

Parallel Worlds: Evolution Of Life Across The Cosmos Wallace Arthur, 2024-12-27 Humanity is fast approaching the point of being able to answer the age old question Are we alone in the cosmos The answer will almost certainly turn out to be no This is virtually guaranteed by two discoveries made in the last hundred years or so that the Milky Way is just one of countless galaxies and that the number of planets beyond our solar system exoplanets is vast But what is extraterrestrial life actually like What kinds of creatures roam the surfaces of alien planets or swim in their seas Are they typically in the genre of life as we know it or are they characterized by exotic forms and as yet undiscovered metabolism In Parallel Worlds Wallace Arthur argues that we should expect to find creatures that are similar in broad terms to those of Earth This can be anticipated because the environments of habitable planets have many parallel features so Darwinian natural selection should work in parallel ways producing broadly parallel trees of life This book takes the form of a step by step argument in favour of the hypothesis that there are multiple worlds inhabited by life forms that are broadly parallel to those of our home planet Like all good hypotheses it s testable The testing won t be easy and it isn t imminent but it will happen eventually providing humanity lasts for long enough
