

Activity – English and Metric Linear Measurements

Purpose

Students will compare length/height as a measurement by finding each the size by using the English unit, and by identifying a relationship to gauge the approximate or exact measurement in centimeters both on drawings of three-dimensional and two-dimensional objects.

Students will understand the differences between systems. They will understand the need to give a number assigned to that the measurement is although it does not always have meaning in gauge (the part of the object opposite from left to right). This activity is to be used, revised, and extended to measurements and geometric skills in the fields of science, mathematics, architecture.

Students will be able to compare their drawings with the English/centimeter and by using mathematical operations. They will be able to find the length of the same, the English system of measurement of the metric measurement that the same of measurement objects used either centimeters or English measurements with centimeter measurement systems to provide that information about the measurement units, which helps students learn about

Equipment

- Number Chart
- Calculator
- Paper – English to metric
- Activity 1.1 for Student Communication

Procedure

This activity will provide you with a foundation of basic measuring skills and simple mathematical calculations.

Complete the following questions by plotting your answers in the space provided.

All three measurements showing with 3 pictures show the same but in different (English) forms (in, cm, ft, m, etc.).

For example, if you have a mathematical equation and the result is 10.5cm, your answer is not in correct units. The correct answer would be 10.5m. If you are unsure, you must go to your teacher to explain.

Each measurement necessary to understand will have the correct unit. You will need to take your measurement and convert it to the correct unit. Each measurement must be converted to the correct unit.
