

Exhaust valves, engine D12CLBE2

265 Check that the scribed line marking on the camshaft is lined up between the markings on the bearing cap. The digit markings indicate for which cylinder the valves can be adjusted.

Engines without VEB have adjusting screws instead of shims for adjusting the valve clearance on the exhaust valves.

Fig. 146 Cam shaft marking

266 Adjust the valve yoke to zero clearance, so that it does not fit up against the valve stem.

Fig. 147 Valve yoke adjusting screw

267 Screw down the adjusting screw until it fits up against the valve stem and screw one further hexagon flat (60°). Tighten down the lock nut to the specified torque.

IMPORTANT! When the adjusting screw is screwed down, the yoke must at the same time be pressed down until it is in contact with the valve stems. It is very important that the pressure is applied as close to the adjusting screw as possible.

Fig. 148 Valve yoke
