Advanced Mechanics Of Materials Fall 2014:

Advanced Engineering Materials and Modeling Ashutosh Tiwari, N. Arul Murugan, Rajeev Ahuja, 2016-08-05 The engineering of materials with advanced features is driving the research towards the design of innovative materials with high performances. New materials often deliver the best solution for structural applications precisely contributing towards the finest combination of mechanical properties and low weight. The mimicking of nature's principles lead to a new class of structural materials including biomimetic composites, natural hierarchical materials and smart materials. Meanwhile, computational modeling approaches are the valuable tools complementary to experimental techniques and provide significant information at the microscopic level and explain the properties of materials and their very existence. The modeling also provides useful insights to possible strategies to design and fabricate materials with novel and improved properties. The book brings together these two fascinating areas and offers a comprehensive view of cutting edge research on materials interfaces and technologies in the engineering materials. The topics covered in this book are divided into 2 parts: Engineering of Materials Characterizations Applications and Computational Modeling of Materials. The chapters include the following: Mechanical and resistance behavior of structural glass beams, Nanocrystalline metal carbides microstructure characterization, SMA reinforced laminated glass panel, Sustainable sugarcane bagasse cellulose for papermaking, Electrospun scaffolds for cardiac tissue engineering, Bio inspired composites, Density functional theory for studying extended systems, First principles based approaches for modeling materials, Computer aided materials design, Computational materials for stochastic electromagnets, Computational methods for thermal analysis of heterogeneous materials, Modelling of resistive bilayer structures, Modeling tunneling of superluminal photons through Brain Microtubules, Computer aided surgical workflow modeling, Displaced multiwavelets and splitting algorithms.
