Artificial Intelligence and New Age Technology Akanchha Singh, Pragati Chauhan, Pooja Kapoor, Neeraj Chopra, Yogita Sharma, Superna Venaik, Rashee Singh, Eram Aziz, Mira Mishra, 2026-02-19. Artificial Intelligence (AI) has transcended its origins as a computational discipline to become a transformative force across nearly every domain of human endeavour. From boardrooms to courtrooms, classrooms to clinics, AI is reshaping how decisions are made, how knowledge is transferred, and how societies evolve. This book, *Artificial Intelligence and New Age Technology: Exploring Innovations, Challenges, and Sustainable Business Landscapes*, is a

multidisciplinary exploration of AI's innovations, its challenges and the sustainable pathways it must follow to serve humanity responsibly. As we transition from Industry 4.0 to the more human-centric vision of Industry 5.0, the integration of intelligent technologies with ethical, inclusive and sustainable values becomes paramount. AI offers immense potential to enhance decision making, automate complex processes and personalize experiences. Yet its rapid adoption also raises pressing questions around accountability, privacy, equity and governance.

Food safety foresight: approaches to identify future food safety issues Siligato, R.; Trieb, J.; Di Martino, M.; Fattori, V.; Lipp, M., Foresight approaches in food safety enable the proactive identification and management of emerging issues including both risks and opportunities over the medium to long term. These approaches are most effective when human expertise is complemented by emerging digital tools and supported by strong knowledge partnerships among stakeholders. This publication outlines best practices and guiding principles for an effective food safety foresight approach designed for policymakers, regulators, researchers and industry professionals. It supports timely informed decision making to strengthen preparedness across agrifood systems. As global agrifood systems undergo rapid transformation driven by factors such as climate change, urbanization, global trade and technological innovation, the complexity of food safety challenges continues to grow. This publication explores how foresight techniques can be used to prepare for emerging issues and inform science and evidence-based risk assessments. It highlights the importance of multisectoral collaboration and knowledge sharing, drawing on insights from a global network of experts from governments, international organizations, research institutes, universities and the private sector convened by FAO in 2025. The FAO Food Safety Foresight Programme proactively identifies, assesses and prioritizes emerging trends and drivers shaping agrifood systems that may have implications for food safety. Effective food safety foresight begins with clear objectives and a flexible, structured approach that combines qualitative and quantitative data. It relies on expert-led intelligence gathering supported by digital tools to identify emerging risks and opportunities. Inclusive stakeholder engagement across sectors enhances insight and objectivity. Success depends on strong communication, institutional buy-in and alignment with decision-making processes. Even with limited resources, foresight capacity can start small and grow over time. This approach empowers stakeholders to anticipate and respond to future food safety challenges, supporting resilient agrifood systems and proactive policy making worldwide.
