Error Control Coding Peter Sweeney, 2002-04-29 *Error Control Coding From Theory to Practice* provides a concise introduction to basic coding techniques and their application. The fundamental concepts of coding theory are explained using simple examples with minimum use of complex mathematical tools. The selection of appropriate codes and the design of decoders are discussed. Bridging the gap between digital communications and information theory, this accessible approach will appeal to students and practising engineers alike. The clear presentation and practical emphasis make this book an excellent tool for both communications and electronic engineering students. Practitioners new to the field will find this text an essential guide to coding. Features include: End of chapter problems to test and develop the reader's understanding of the most popular codes and decoding methods; Finite field arithmetic and algebraic decoding methods for BCH and Reed Solomon codes; Detailed coverage of Viterbi decoding and related implementation issues; Turbo codes and related code types including Gallager codes and turbo product codes; Practical examples of MAP and SOVA decoding for turbo codes. **Error**

Advanced Intelligent Computing Theories and Applications. With Aspects of Theoretical and Methodological Issues De-Shuang Huang, Donald C. Wunsch, Daniel S. Levine, Kang-Hyun Jo, 2008-09-08 The International Conference on Intelligent Computing ICIC was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, bioinformatics and computational biology etc. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems and solutions related to the multifaceted aspects of intelligent computing. ICIC 2008 held in Shanghai, China, September 15-18, 2008, constituted the 4th International Conference on Intelligent Computing. It built upon the success of ICIC 2007, ICIC 2006 and ICIC 2005 held in Qingdao, Kunming and Hefei, China, 2007, 2006 and 2005 respectively. This year the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore the theme for this conference was Emerging Intelligent Computing Technology and Applications. Papers focusing on this theme were solicited, addressing theories, methodologies and applications in science and technology.
