Jean-Yves Le Boudec

Fall 2009

1 Module 1: TCP/IP Architecture

Exercise 1.9 1. Consider the transparency “Nagle’s Algorithm: Example”. Assume that the packet at line 4 is lost in the network. Give a possible continuation of the message chart.

Solution: In the hypothesis that the override timer is bigger than the retransmission timer, we have **repacketization**: at the retransmission timeout the lost bits are retransmitted, together with the bits arrived in the meantime. In this case Nagle’s algorithm does not come into play.

2. Assume Nagle’s algorithm is disabled for a given connection. Is it possible that some data written by the application is still delayed? Prove your answer.
