ESCAPE 17 held in Bucharest Romania from 27-30 May 2007. The ESCAPE series serves as a forum for scientists and engineers from academia and industry to discuss progress achieved in the area of Computer Aided Process Engineering (CAPE). The main goal was to emphasize the continuity in research of innovative concepts and systematic design methods as well as the diversity of applications emerged from the demands of sustainable development. ESCAPE 17 highlights the progress in software technology needed for implementing simulation based tools. The symposium is based on 5 themes and 27 topics following the main trends in CAPE area: Modelling Process and Products Design, Optimisation and Optimal Control and Operation System Biology and Biological Processes, Process Integration and Sustainable Development. Participants from 50 countries attended and invited speakers presented 5 plenary lectures tackling broad subjects and 10 keynote lectures. Satellite events added a plus to the scientific dimension to this symposium. All contributions are included on the CD-ROM attached to the book. 13th International Colloquium Fuels Nicolai Schubert, 2021-11-08. With the signing of the Paris Agreement in December 2015, the United Nations explained their willingness to limit the GHG Emissions and contribute to the measures against the global warming effect. In 2019, the European Commission proposed the Green Deal and as a consequence, the target to be climate neutral in 2050. In consequence, the fossil based energy system has to transform into a climate neutral energy system with renewable and sustainable energy carriers. Research on and development of alternative fuels and new production processes are ongoing to provide the technical solution. Political actions are needed to provide the economic framework for the introduction of such alternative fuel solutions. The fulfilment of the European CO₂ reduction targets until 2050 needs realistic technical solutions including backwards compatible approaches for existing vehicle fleets. An economic and sustainable development towards climate neutral mobility requires a holistic view based on life cycle assessments for the different mobility approaches including the economic impacts as well as financing options. A synergetic discussion of solutions for future fuels and powertrain technologies is needed to develop an economic pathway to a sustainable and affordable mobility of tomorrow. The challenging goal for mobility can only be achieved through an international cooperation of universities, the automobile industry, energy producers, the oil industry and the legislative bodies of the member states. The international colloquium aims to contribute to the development of a climate neutral mobility by exchanging views on and discussing all aspects connected with the powertrain fuel environment system including the necessary political regulations.

The Carbon Chain in Carbon Dioxide Industrial Utilization Technologies Dariusz Wawrzyńczak, Izabela Majchrzak-Kucęba, Covadonga Pevida, Giuseppe Bonura, Rita Nogueira, Marcello de Falco, 2022-12-26. A shift towards implementation of renewable energy has disadvantages such as power availability, storage capacity and accompanying costs and therefore the potential of clean fossil fuel technologies to ensure the stability of electricity generation needs to be reconsidered until these challenges will be overcome. These clean technologies can help prevent the

greenhouse effect and at the same time guarantee energy security as coal is a widespread price stable raw material that is available in large quantities This book focuses on the carbon chain starting from the formation of CO₂ through its capture possible cleaning to the production of useful products such as dimethylether methanol and carbonated cement prefabricates The comprehensive case study presents the research results of an international team established within the CCS CCU technology for carbon footprint reduction using bio adsorbents BIOCO₂ project Nanomaterials for CO₂ Capture, Storage, Conversion and Utilization Phuong Nguyen Tri, Haobin Wu, Simon Barnabe, Pierre Benard, Tuan Anh Nguyen, 2021-04-10 The gradual increase of population and the consequential rise in the energy demands in recent years have led to the widespread use of fossil fuels CO₂ transformation by various processes is considered as a promising alternative technology This book sets out the fundamentals of how nanomaterials are being used for this purpose Nanomaterials for CO₂ Capture Storage Conversion and Utilization summarizes the research development and innovations in the capture storage transformation and utilization of CO₂ into useful products and raw chemicals for industry This is achieved by using advanced processes such as CO₂ reforming bi reforming and tri reforming of hydrocarbons or biomass derivatives homogeneous and heterogeneous hydrogenation photochemical reduction photoelectrochemical reduction electrochemical reduction biochemical reduction supercritical CO₂ technology advanced catalyst synthesis for CO₂ conversion organic carbonates for polymers synthesis from CO₂ and CO₂ capture and sequestration The systematic and updated reviews on the mentioned sectors especially on the use of nanotechnology for the transformation of CO₂ is scarce in the literature Thus the book addresses the recent knowledge gaps and potential solutions of the storage utilization and transformation of CO₂ as well as its promising applications This is an important reference source for materials scientists engineers and energy scientists who want to understand how nanotechnology is helping us to solve some of the world s major energy problems Shows how nanomaterials are being used to create more efficient CO₂ capture storage and conversation systems Outlines the major nanomaterials based techniques to create such systems Assesses the major challenges in using nanomaterials for energy capture storage and conversion
