Department of Mechanical Engineering, 1964      Infusing Real World Experiences into Engineering Education AMD NextGen Engineer, National Academy of Engineering, 2012-11-15

The aim of this report is to encourage enhanced richness and relevance of the undergraduate engineering education experience and thus produce better prepared and more globally competitive graduates by providing practical guidance for incorporating real world experience in US engineering programs. The report a collaborative effort of the National Academy of Engineering NAE and Advanced Micro Devices Inc. AMD builds on two NAE reports on The Engineer of 2020 that cited the importance of grounding engineering education in real world experience. This project also aligns with other NAE efforts in engineering education such as the Grand Challenges of Engineering Changing the Conversation and Frontiers of Engineering Education. This publication presents 29 programs that have successfully infused real world experiences into engineering or engineering technology undergraduate education. The Real World Engineering Education committee acknowledges the vision of AMD in supporting this project which provides useful exemplars for institutions of higher education who seek model programs for infusing real world experiences in their programs. The NAE selection committee was impressed by the number of institutions committed to grounding their programs in real world experience and by the quality creativity and diversity of approaches reflected in the submissions. A call for nominations sent to engineering and engineering technology deans chairs and faculty yielded 95 high quality submissions. Two conditions were required of the nominations: 1. an accredited 4 year undergraduate engineering or engineering technology program was the lead institution and 2. the nominated program started operation no later than the fall 2010 semester. Within these broad parameters nominations ranged from those based on innovations within a single course to enhancements across an entire curriculum or institution. Infusing Real World Experiences into Engineering Education is intended to provide sufficient information to enable engineering and engineering technology faculty and administrators to assess and adapt effective innovative models of programs to their own institution's objectives. Recognizing that change is rarely trivial the project included a brief survey of selected engineering deans' concern in the adoption of such programs.
