reader to understand why it has taken so long to understand shape perception and offers a new theory of shape. Until recently shape was treated in combination with such other perceptual properties as depth motion speed and color. This resulted in apparently contradictory findings which made a coherent theoretical treatment of shape impossible. Pizlo argues that once shape is understood to be unique among visual attributes and the perceptual mechanisms underlying shape are seen to be different from other perceptual mechanisms the research on shape becomes coherent and experimental findings no longer seem to contradict each other. A single theory of shape perception is thus possible and Pizlo offers a theoretical treatment that explains how a three dimensional shape percept is produced from a two dimensional retinal image assuming only that the image has been organized into two dimensional shapes. Pizlo focuses on discussion of the main concepts telling the story of shape without interruption. Appendixes provide the basic mathematical and computational information necessary for a technical understanding of the argument.
