

Shear strain gauges:

Strain gauges do not respond to shear strains. However the relationship between shear and normal strains can be utilized to obtain from a strain rosette an output directly proportional to the shear strain in the surface.

The two strain gauges a and b oriented so that the x axis bisects the angle between the gage axes. Strain along two gage axes is

$$\epsilon_A = \frac{\epsilon_{xx} + \epsilon_{yy}}{2} + \frac{\epsilon_{xx} - \epsilon_{yy}}{2} \cos 2\theta + \frac{\gamma_{xy}}{2} \sin 2\theta$$

$$\epsilon_B = \frac{\epsilon_{xx} + \epsilon_{yy}}{2} + \frac{\epsilon_{xx} - \epsilon_{yy}}{2} \cos 2\theta - \frac{\gamma_{xy}}{2} \sin 2\theta$$

From the above eq. The shear strain γ_{xy} is

$$\gamma_{xy} = \frac{\epsilon_A - \epsilon_B}{\sin 2\theta}$$

From above eq the difference in the normal strain sensed by any two arbitrarily oriented gauges in a uniform strain field is directly proportional to the shear strain along an axis bisecting the included angle between the strain gage axes. When the included angle is 90° , i.e. the rosette is a two-element rectangular rosette, above eq can be reduced to

$$\gamma_{xy} = \epsilon_A - \epsilon_B$$

Hence by orienting a two-element rectangular rosette such that the x-axis bisects the 90° angle between the gage elements and connecting the gage elements in the adjacent arm of a Wheatstone bridge, an output from the rosette equal to the shear strain γ_{xy} can be obtained directly.

Zemanian, James William DALLY (and RILEY (William Franklin)), 1965 **Modern Experimental Stress Analysis** James F. Doyle, 2004-04-02 All structures suffer from stresses and strains caused by factors such as wind loading and vibrations Stress analysis and measurement is an integral part of the design and management of structures and is used in a wide range of engineering areas There are two main types of stress analyses the first is conceptual where the structure does not yet exist and the analyst has more freedom to define geometry materials loads etc generally such analysis is undertaken using numerical methods such as the finite element method The second is where the structure or a prototype exists and so some parameters are known Others though such as wind loading or environmental conditions will not be completely known and yet may profoundly affect the structure These problems are generally handled by an ad hoc combination of experimental and analytical methods This book therefore tackles one of the most common challenges facing engineers how to solve a stress analysis problem when all of the required information is not available Its central concern is to establish formal methods for including measurements as part of the complete analysis of such problems by presenting a new approach to the processing of experimental data and thus to experimentation itself In addition engineers using finite element methods will be able to extend the range of problems they can solve and thereby the range of applications they can address using the methods developed here Modern Experimental Stress Analysis Presents a comprehensive and modern reformulation of the approach to processing experimental data Offers a large collection of problems ranging from static to dynamic linear to non linear Covers stress analysis with the finite element method Includes a wealth of documented experimental examples Provides new ideas for researchers in computational mechanics **Manual on Experimental Stress Analysis** Society for Experimental Stress Analysis, 1959 **Experimental Stress Analysis** Charles Lipson, W.M. Hyde, E. Ollerton, 2012-12-06 This volume records the proceedings of an international conference organised as a tribute to the contribution made by Professor

H Fessler over the whole of his professional life in the field of applied stress analysis The conference held at the University of Nottingham on 30 and 31 August 1990 was timed to coincide with the date of his formal retirement from the post of Professor of Experimental Stress Analysis in the University The idea grew from discussions between some of Professor Fessler's academic associates from Nottingham and elsewhere An organising committee was set up and it was decided to invite contributions to the conference in the form of review papers and original research papers in the field of experimental theoretical and computational stress analysis The size of the response both in papers submitted and in attendance at the conference indicates that the idea proved attractive to many of his peers former associates and research students A bound copy of the volume is to be presented to Professor Fessler at the conference dinner on 30 August 1990
