Practical Handbook Of Processing And Recycling Municipal Waste:

Practical Handbook of Processing and Recycling Municipal Waste AGR Manser, Alan Keeling, 1996-09-12 If we could understand the scientific and engineering principles behind recycling our ability to use reprocessed materials would improve considerably If we could then apply those principles our efforts to process and recycle waste would be significantly more efficient and cost effective Practical Handbook of Processing and Recycling Municipal Waste provides all of the information necessary for vastly improving the way we recycle materials It first develops basic engineering and scientific theories related to processing and recycling municipal waste The authors then show how the behavioral characteristics of waste can actually be predicted with some degree of accuracy hence turning waste disposal engineering from a matter of guesswork into a science From Europe to the United States to the Far East humankind understands the need for and the challenges of recycling and reusing waste This handbook is the guide to successful efficient waste processing and reuse

Problem-Solving Exercises in Green and Sustainable Chemistry Albert S. Matlack, Andrew P. Dicks, 2015-11-05 When confronted with a problem in science the way to proceed is not always obvious The problem may seem intractable or there may be many possible solutions with some better than others Problem Solving Exercises in Green and Sustainable Chemistry teaches students how to analyze and solve real world problems that occur in an environmental context Current Developments in Biotechnology and Bioengineering Rupam Kataki, Ashok Pandey, Samir Kumar Khanal, Deepak Pant, 2020-07-08 Current Developments in Biotechnology and Bioengineering Sustainable Bioresources for the Emerging Bioeconomy outlines recent advances in bioenergy biorefinery and the bioeconomy an essential element for a 21st century bio based society The book provides information on biomass and various conversion technologies with different parameters that affect the conversion process Sections cover different bioproducts biorefinery systems energy and greenhouse gas emission balances of bioenergy and biorefinery and environmental and economic footprints of bioeconomy Finally different strategies adopted by developed and developing countries for the promotion and implementation of a bioeconomy concept for a bio based society are systematically covered The book provides comprehensive information starting from early progress to the latest trends on bioenergy biorefinery and bioeconomy with special reference to the developed and the developing countries and the linkage between bioeconomy and climate change mitigation in simple scientific language to appeal to a wider audience Includes the fundamentals and concepts of biomass and bioenergy Outlines recent technology development for biomass conversion Provides concept for different bioproducts Covers global strategies and policies on the development of bioeconomies **Introduction to Green Chemistry** John Andraos, Albert S. Matlack, 2022-03-09 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluororous biphasic catalysis metal organic frameworks and process intensification which were barely mentioned in the First Edition have become major areas of research In addition government funding has ramped up the development of fuel cells and biofuels This reflects the evolving

focus from pollution remediation to pollution prevention Copiously illustrated with more than 800 figures the Third Edition provides an update from the frontiers of the field It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry NEW AND EXPANDED RESEARCH TOPICS Metal organic frameworks Metrics Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society

Introduction to Green Chemistry Albert Matlack, 2001-04-03 With roughly 5500 references this book may be considered more of a treatise than a mere introduction to green chemistry Using an unconventional approach the author provides a broad but thorough review of the subject covering traditional green chemistry topics such as catalysis benign solvents and alternative feedstocks before moving on to less frequently covered topics such as chemistry of longer wear and population and the environmental chemistry Topics such as these highlight the importance of chemistry to everyday life and demonstrate the real benefits that wider exploitation of green chemistry can have for society

Sustainable Construction Materials and Technologies Yoon-Moon Chun, Peter Claisse, Tarun R. Naik, Eshmaiel Ganjian, 2020-11-25 The construction materials industry is a major user of the world's resources While enormous progress has been made towards sustainability the scope and opportunities for improvements are significant To further the effort for sustainable development a conference on Sustainable Construction Materials and Technologies was held at Coventry University Coventry U K from June 11th 13th 2007 to highlight case studies and research on new and innovative ways of achieving sustainability of construction materials and technologies This book presents selected important contributions made at the conference Over 190 papers from over 45 countries were accepted for presentation at the conference of which approximately 100 selected papers are published in this book The rest of the papers are published in two supplementary books Topics covered in this book include sustainable alternatives to natural sand stone and Portland cement in concrete sustainable use of recyclable resources such as fly ash ground municipal waste slag pozzolan rice husk ash silica fume gypsum plasterboard drywall and lime in construction
