Probability and Statistical Inference J.G. Kalbfleisch, 1985. A carefully written text suitable as an introductory course for second or third year students. The main scope of the text guides students towards a critical understanding and handling of data sets together with the ensuing testing of hypotheses. This approach distinguishes it from many other texts using statistical decision theory as their underlying philosophy. This volume covers concepts from probability theory backed by numerous problems with selected answers.

Probability and Statistical Inference J.G. Kalbfleisch, 2011-10-01. This book is in two volumes and is intended as a text for introductory courses in probability and statistics at the second or third year university level. It emphasizes applications and logical principles rather than mathematical theory. A good background in freshman calculus is sufficient for most of the material presented. Several starred sections have been included as supplementary material. Nearly 900 problems and exercises of varying difficulty are given, and Appendix A contains answers to about one third of them. The first volume Chapters 1-8 deals with probability models and with mathematical methods for describing and manipulating them. It is similar in content and organization to the 1979 edition. Some sections have been rewritten and expanded, for example the discussions of independent random variables and conditional probability. Many new exercises have been added. In the second volume Chapters 9-16 probability models are used as the basis for the analysis and interpretation of data. This material has been revised extensively. Chapters 9 and 10 describe the use of the likelihood function in estimation problems as in the 1979

edition Chapter 11 then discusses frequency properties of estimation procedures and introduces coverage probability and confidence intervals Chapter 12 describes tests of significance with applications primarily to frequency data The likelihood ratio statistic is used to unify the material on testing and connect it with earlier material on estimation
