The Routledge Handbook of Translation Technology and Society Stefan Baumgarten, Michael Tieber, 2025-10-08

The Routledge Handbook of Translation Technology and Society offers the first comprehensive and critical exploration of translation technologies in the context of globalised multilingual societies within an increasingly AI dominated world. This handbook calls for a fundamental rethinking of traditional approaches to translation, examining the ethical, ideological, socioeconomic and environmental implications of digital tools and practices such as professional AI driven translation, everyday machine translation, crowdsourcing translation or platform based translation work. It provides deep insights into pressing issues such as the commodification of language, inclusivity in so called low resource languages, data colonialism and labour exploitation. By questioning conventional science narratives and advocating for sustainable, inclusive and equitable applications of translation technologies, this handbook empowers readers to engage critically with current trends and challenges in the digital age. Readers will benefit from an interdisciplinary approach that combines novel theoretical foundations with empirical research and practical case studies. It serves as a foundational reference and a springboard for critical future research in an evolving sociotechnical translation ecosystem where the blurring boundaries between human and machinic agents foster new modes of translator-machine interaction. This handbook is an essential resource for academics, researchers and professionals in translation studies, digital humanities, science and technology studies or digital discourse studies. Chapter 1, 15 and introduction of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 International license.
