Adolescent Use of New Media and Internet Technologies Gordon P. D. Ingram, 2023-03-31 This book engages with contemporary and often polarizing debates surrounding the risks of adolescent use of digital media and internet technologies. By drawing on multiple research studies, the text synthesizes current understandings of the impacts of social network use, online gaming, pornography, and phenomena including cyberbullying, cyberstalking, and internet addiction to develop recommendations for the effective identification of at-risk youth as well as strategies for informed communication about online risks and opportunities. It shows how media discussion of risks to children and teenagers from new technology is highly emotive and often exaggerated, rooted in the moral panic surrounding new cultural practices that young people engage in but which adults do not understand. Online risks are thus conceptualized as centering on three areas specific to adolescence which have undergone radical changes due to new internet technology. These include young people's identity, the types of content that are accessed, and social relationships. The author shows how these matters stem from the potential of new technology to establish new interpersonal connections, emphasizing how it brings opportunities as much as risks. As such, he provides a uniquely balanced discussion of potential dangers while also emphasizing the opportunities for social, academic, and personal growth which new technologies afford young people. It will be indispensable for researchers and clinicians interested in assessing levels of online risk, as well as scholars and educators with interests in cyberpsychology, social psychology, cyber culture, social aspects of computing, and media and adolescent development.

Computational Social Science Wei Luo, Maria Ciurea, Santosh Kumar, 2021-02-18 Selected papers from the International Conference on New Computational Social Science focusing on the following five aspects: Big data acquisition and analysis; Integration of qualitative research and quantitative research; Sociological Internet experiment research; Application of ABM simulation method in Sociology Research; Research and development of new social computing tools. With the rapid development of information technology, especially sweeping progress in the Internet of things, cloud computing, social networks, social media, and big data, social computing as a data-intensive science is an emerging field that leverages the capacity to collect and analyze data with an unprecedented breadth, depth, and scale. It represents a new computing paradigm and an interdisciplinary field of research and application. A broad comprehension of major topics involved in social computing is important for both scholars and practitioners. This proceedings presents and discusses key concepts and analyzes the state of the art of the field. The conference not only gave insights on social computing but also affords conduit for future research in the field. Social computing has two distinct trends. One is on the social science issues such as computational social science, computational sociology, social network analysis, etc. The other is on the use of computational techniques. Finally, some new challenges ahead are summarized, including interdisciplinary cooperation and training, big data sharing for scientific data, mashups, and privacy protection.
