Short-Answer Questions for Thought and Review

- Allosteric inhibition is a type of noncompetitive inhibition where regulatory molecules bind to enzymes at sites other than the active site and turn the enzyme off. The binding is irreversible and generally involves changing the shape of the enzyme so that it can no longer function (cannot bind substrate). Allosteric inhibition essentially "removes" enzymes from the mix, thus the only way to overcome the inhibition is to produce more enzyme above the level of the inhibitor.
- Fermentation is necessary to regenerate electron carriers (i.e., NAD⁺) to keep glycolysis running. Cells that ferment can't use cellular respiration to do this and so the only way to keep making even small amounts of energy is to keep using glycolysis, which means you need to continually recycle the supply of NAD⁺.

Introduction to Petroleum Biotechnology James G. Speight, Nour Shafik El-Gendy, 2017-12-11 Introduction to Petroleum Biotechnology introduces the petroleum engineer to biotechnology bringing together the various biotechnology methods that are applied to recovery refining and remediation in the uses of petroleum and petroleum products A significant amount of petroleum is undiscoverable in reservoirs today using conventional and secondary methods This reference explains how microbial enhanced oil recovery is aiding to produce more economical and environmentally friendly metabolic events that lead to improved oil recovery Meanwhile in the downstream side of the industry petroleum refining operators are facing the

highest levels of environmental regulations while struggling to process more of the heavier crude oils since conventional physical and chemical refining techniques may not be applicable to heavier crudes This reference proposes to the engineer and refining manager the concepts of bio refining applications to not only render heavier crudes as lighter crudes through microbial degradation but also through biodenitrogenation biometallization and biodesulfurization making more petroleum derivatives purified and upgraded without the release of more pollutants Equipped for both upstream and downstream to learn the basics this book is a necessary primer for today s petroleum engineer Presents the fundamentals behind petroleum biotechnology for both upstream and downstream oil and gas operations Provides the latest technology in reservoir recovery using microbial enhanced oil recovery methods Helps readers gain insight into the current and future application of using biotechnology as a refining and fuel blending method for heavy oil and tar sands **Astrobiology** Charles S.
