- In a Stock name such as iron (II) sulfate, the roman numeral tells us (2)
 - How many atoms of Fe are in one formula unit.
 - How many sulfate ions can be attached to the iron atom.
 - The charge on each Fe ion.
 - The total positive charge of the formula unit.
- The result of changing a subscript in a correctly written chemical formula is to (4)
 - Change the number of moles represented in the formula.
 - Change the charges on the other ions in the compound.
 - Change the formula so that it no longer represents the compound.
 - Have no effect on the formula.
- Derive a generalization for when an acid name will end in the suffix -ic or -ous. If ending in -ic, the anion ended in -ate. If ending in -ous, the anion ended in -ite.
- Derive a generalization for when an acid name will begin with the prefix hydro-. If prefix is hydro-, the anion ended in -ite. This is almost always a monatomic ion.

Physical Science, 1863. *Select Thermodynamic Models for Process Simulation* Jean-Charles de Hemptinne, Jean-Marie Ledanois, 2012. The selection of the most adequate thermodynamic model in a process simulation is an issue that most process engineers have to face sooner or later. This book, conceived as a practical guide, aims at providing adequate answers by analysing the questions to be looked at. The analysis in the first chapter yields three keys that are further discussed in three different chapters: 1. A good understanding of the properties required in the process and their method of calculation is the first key. The second chapter provides to that end, in a synthetic manner, the most important equations that are derived from the fundamental principles of thermodynamics. 2. An adequate description of the mixture, which is a combination of models and parameters, is the second key. The third chapter makes the link between components and models, both from a numerical parameterisation and physical molecular interactions point of view. Finally, 3. a correct view of the phase behaviour and trends in regard of the process conditions is the third key. The fourth chapter illustrates the phase behaviour and makes model recommendations for the most significant industrial systems. A decision tree is provided at the end of this chapter. In the last chapter, the key questions are reviewed for a number of typical processes. This book is intended for process engineers who

are not specialists of thermodynamics but are confronted with this kind of problems and need a reference book as well as process engineering students who will find an original approach to thermodynamics complementary of traditional lectures
