Abstract: Coffee is a significant traded commodity for developing countries. Among the various diseases affecting coffee, anthracnose caused by *Colletotrichum* spp. has re-emerged as a major constraint on global coffee production. To better understand the *Colletotrichum* species complex associated with coffee anthracnose, we characterized *Colletotrichum* spp. using a combination of phenotypic traits, MAT1-2 (ApMat) gene analysis, multi-locus phylogenetic (ITS, ACT, CHS-1, and GAPDH), and pathogenicity assays. A total of 74 *Colletotrichum* isolates were collected from coffee plants exhibiting anthracnose symptoms across nine coffee plantations in China. Among these, 55 isolates were identified as the *C. gloeosporioides* species complex using the ApMat locus, while the remaining 19 isolates were identified through multi-locus phylogenetic analyses. The isolates represented seven *Colletotrichum* species from five species complexes: *C. gloeosporioides* (including *C. siameuse*, *C. nupharicola*, and *C. theobromicola*), *C. boninensis* (*C. karstii*), *C. gigasporum* (*C. gigasporum*), *C. orchidearum* (*C. effusicola*), and *C. magnum* (*C. brevissporum*). This is the first report of *C. nupharicola* and *C. effusicola* causing coffee anthracnose worldwide, and the first report of *C. nupharicola* in China. Pathogenicity tests confirmed that all seven species were capable of infecting coffee leaves. This research enhances our understanding of the *Colletotrichum* species responsible for coffee anthracnose, and provides valuable insights for developing effective disease management strategies.

1. Introduction

Coffee is a major traded commodity in the developing world [1]. Three primary commercial varieties are cultivated globally: *Coffea arabica* (*arabica*), *C. canephora* var. *robusta* (*robusta*), and *C. liberica* (*liberica*) [2]. Among these, *arabica* and *robusta* are the dominant species, accounting for over 99% of global exports. Coffee was introduced to China more than a century ago, and has since become a significant cash crop in Yunnan and Hainan provinces. *Arabica* coffee is predominantly cultivated in Yunnan, while *robusta* coffee is mainly grown in Hainan [1,3].

Diseases are among the most critical factors limiting coffee production. The most prevalent and economically significant diseases include coffee rust (*Hemileia vastatrix*),

Plant, Soil and Microbes in Tropical Ecosystems Suresh Kumar Dubey, Satish Kumar Verma, 2021-09-25 This book describes the multitude of interactions between plant soil and micro organisms It emphasizes on how growth and development in plants starting from seed germination is heavily influenced by the soil type It describes the interactions established by plants with soil and inhabitant microbial community The chapters describe how plants selectively promote certain microorganisms in the rhizospheric ecozone to derive multifarious benefits such as nutrient acquisition and protection from diseases The diversity of these rhizospheric microbes and their interactions with plants largely depend on plant genotype soils attributes and several abiotic and biotic factors Most of the studies concerned with plant microbe interaction are focused on temperate regions even though the tropical ecosystems are more diverse and need more attention Therefore it is crucial to understand how soil type and climatic conditions influence the plant soil microbes interaction in the tropics Considering the significance of the subject the present volume is designed to cover the most relevant aspects of rhizospheric microbial interactions in tropical ecosystems Chapters include aspects related to the diversity of rhizospheric microbes as well as modern tools and techniques to assess the rhizospheric microbiomes and their functional roles The book also covers applications of rhizospheric microbes and evaluation of prospects improving agricultural practice and productivity through the use of microbiome technologies This book will be extremely interesting to microbiologists plant biologists and ecologists

These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered.

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts.

The Secret History is an exceptional and suspenseful novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
