Research and Development in Progress, 1973 3D QSAR in Drug Design Hugo Kubinyi, 1993-12-31 Progress in medicinal chemistry and in drug design depends on our ability to understand the interactions of drugs with their biological targets Classical QSAR studies describe biological activity in terms of physicochemical properties of substituents in certain positions of the drug molecules The purpose of this book is twofold On the one hand both the novice and the experienced user will be introduced to the theory and application of 3D QSAR analyses and on the other a comprehensive overview of the scope and limitations of these methods is given The detailed discussion of the present state of the art should enable scientists to further develop and improve these powerful new tools The greater part of the book is dedicated to the theoretical background of 3D QSAR and to a discussion of CoMFA applications In addition various other 3D QSAR approaches and some CoMFA related methods are described in detail Thus the book should be valuable for medicinal agricultural and theoretical chemists biochemists and biologists as well as for other scientists interested in drug design Its content starting at a very elementary level and proceeding to the latest methodological results the strengths and limitations of 3D QSAR approaches makes the book also appropriate as a text for teaching and for graduate student courses *Prentice Hall Chemistry*, 2000

Concepts and Applications of Molecular Similarity Mark A. Johnson, Gerald M. Maggiora, 1990-09-24 Offers authoritative overviews of topics related to the definition computation and application of molecular similarity and emphasizes current research trends with molecular similarity as the unifying concept Introduces and defines the concept of molecular similarity and explains how it can be used to explore the data containing 2 D and 3 D chemical information Addresses the basic problem of relating chemical structures to their associated chemical and biological properties Final chapters illustrate the use of similarity arguments in the study of chemical reaction pathways and present theoretical approaches to the concept of molecular similarity
