Classical and Statistical Thermodynamics Ashley H. Carter, 2009 *Nucleation in Condensed Matter* Ken Kelton, Alan Lindsay Greer, 2010-03-19 In *Nucleation in Condensed Matter* key theoretical models for nucleation are developed and experimental data are used to discuss their range of validity A central aim of this book is to enable the reader when faced with a phenomenon in which nucleation appears to play a role to determine whether nucleation is indeed important and to develop a quantitative and predictive description of the nucleation behavior The third section of the book examines nucleation processes in practical situations ranging from solid state precipitation to nucleation in biological systems to nucleation in food and drink *Nucleation in Condensed Matter* is a key reference for an advanced materials course in phase transformations It is also an essential reference for researchers in the field Unified treatment of key theories experimental evaluations and case studies Complete derivation of key models Detailed discussion of experimental measurements Examples of nucleation in diverse systems

Solidification and Crystallization Processing in Metals and Alloys Hasse Fredriksson, Ulla Åkerlind, 2012-08-13 *Solidification and Crystallization Processing in Metals and Alloys* Hasse Fredriksson KTH Royal Institute of Technology Stockholm Sweden Ulla Åkerlind University of Stockholm Sweden Solidification or crystallization occurs when atoms are transformed from the disordered liquid state to the more ordered solid state and is fundamental to metals processing Conceived as a companion volume to the earlier works *Materials Processing during Casting* 2006 and *Physics of Functional Materials* 2008 this book analyzes solidification and crystallization processes in depth Starting from the thermodynamic point of view it gives a complete description taking into account kinetics and mass transfer down to the final structure Importantly the book shows the relationship between the theory and the experimental results Topics covered include Fundamentals of thermodynamics Properties of interfaces Nucleation Crystal growth in vapours liquids and melts Heat transport during solidification processes Solidification structures faceted dendritic eutectic and peritectic Metallic glasses and amorphous alloy melts *Solidification and Crystallization Processing in Metals and Alloys* features many solved examples in the text and exercises with answers for students Intended for Masters and PhD students as well as researchers in Materials Science Engineering Chemistry and Metallurgy it is also a valuable resource for engineers in industry

Fluids in Porous Media Henk Huinink, 2016-09-06 This book introduces the reader into the field of the physics of processes occurring in porous media It targets Master and PhD students who need to gain fundamental understanding the impact of confinement on transport and phase change processes The book gives brief overviews of topics like thermodynamics capillarity and fluid mechanics in order to launch the reader smoothly into the realm of porous media In depth discussions are given of phase change phenomena in porous media single phase flow unsaturated flow and multiphase flow In order to make the topics concrete the book contains numerous example calculations Further as much experimental data as possible is plugged in to give the reader the ability to quantify phenomena
