Climate Change Adaptation in Developed Nations James D. Ford, Lea Berrang-Ford, 2011-06-27 It is now widely accepted that adaptation will be necessary if we are to manage the risks posed by climate change What we know about adaptation however is limited While there is a well established body of scholarship proposing assessment approaches and explaining concepts few studies have examined if and how adaptation is taking place at a national or regional level

The Social and Behavioural Aspects of Climate Change Pim Martens, Chiung Ting Chang, 2017-09-08 Over the past few years and certainly since the publication of the Stern Report there has been increasing recognition that climate change is

not only an environmental crisis but one with important social and economic dimensions There is now a growing need for multi disciplinary research and for the science of climate change to be usefully translated for policy makers Until very recently scientific and policy emphasis on climate change has focused almost exclusively on mitigation efforts mechanisms and regulations to reduce greenhouse gas emissions The success of such efforts to date is debatable In fact the impact of ever more stringent emission control programmes could potentially have enormous social consequences Little effort has been expended on the exploration of a systematic evaluation of climate stabilization benefits or the costs of adapting to a changed climate let alone attempting to integrate different approaches There is an increasing recognition that the key actors in the climate crisis also need to be preparing for change that is unavoidable This has resulted in a greater consideration of vulnerability and adaptation The book based on the research programme Vulnerability Adaptation and Mitigation VAM which ran from 2004 to 2010 funded by the Netherlands Organisation for Scientific Research NWO presents a cluster of case studies of industries communities and institutions which each show how vulnerability adaptation and mitigation analyses can be integrated using social behavioural sciences Each chapter makes specific recommendations for the studied industry sector community or institution analyses the latest research developments of the field and identifies priorities for future research The book argues that the inherent complexity of climate change will ultimately require a much more integrated response both scientifically to better understand multiple causes and impacts as well as at the scientific policy interface where new forms of engagement between scientists policy makers and wider stakeholder groups can make a valuable contribution to more informed climate policy and practice The book is particularly timely as the scientific research and policy debate is shifting from one of problem framing to new agendas that are much more concerned with implementation the improvement of assessment methodologies from a multi disciplinary perspective and the reframing of current scientific understanding towards mitigation adaptation and vulnerability A critical element in responding to the climate change challenge will be to ensure the translation of these new scientific insights into innovative policy and practice on the ground This book provides some fundamental elements to answer this need The Social and Behavioural Aspects of Climate Change Linking Vulnerability Adaptation and Mitigation will be essential reading for social science researchers and policy managers in the area of climate change as well as for those who want to know what the social and behavioural sciences can contribute toward coping with climate hazards NGOs law firms and businesses in the energy sector or other climate related fields will also find the book of great value

Vulnerability and Adaptation Assessments Ron Benioff, Sandra Guill, Jeffrey Lee, 2012-12-06 The possible impacts of global climate change on different countries has led to the development and ratification of the Framework Convention on Climate Change FCCC and has a strong bearing on the future sustainable development of developing countries and countries with economies in transition The preparation of analytical methodologies and tools for carrying out assessments of vulnerability and adaptation to climate change is therefore of prime importance to these countries Such assessments are needed to both fulfill the reporting requirements of the countries under the FCCC as well as to prepare their own climate change adaptation and mitigation plans The vulnerability and adaptation assessment guidelines prepared by the U S Country Studies Program bring together all the latest knowledge and experience from around the world on both vulnerability analysis as well as adaptation methodologies It is currently being applied successfully by scientists in

over fifty countries from all the regions of the globe This guidance is being published to share it with the wider scientific community interested in global climate change issues This guidance document has two primary purposes To assist countries in making decisions about the scope and methods for their vulnerability and adaptation assessments To provide countries with guidance and step by step instructions on each of the basic elements of vulnerability and adaptation assessments

New Directions in Climate Change Vulnerability, Impacts, and Adaptation Assessment National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, Subcommittee for a Workshop on New Directions in Vulnerability, Impacts, and Adaptation Assessment, 2009-02-17 With effective climate change mitigation policies still under development and with even the most aggressive proposals unable to halt climate change immediately many decision makers are focusing unprecedented attention on the need for strategies to adapt to climate changes that are now unavoidable The effects of climate change will touch every corner of the world's economies and societies adaptation is inevitable The remaining question is to what extent humans will anticipate and reduce undesired consequences of climate change or postpone response until after climate change impacts have altered ecological and socioeconomic systems so

significantly that opportunities for adaptation become limited This book summarizes a National Research Council workshop at which presentations and discussion identified specific needs associated with this gap between the demand and supply of scientific information about climate change adaptation
