**Climate Risk Informed Decision Analysis (CRIDA)** Mendoza, Guillermo, Jeuken, Ad, Matthews, John H., Stakhiv, Eugene, Kucharski, John, Gilroy, Kristin, 2018-12-31 **Review of the Draft Fourth National Climate Assessment** National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Board on Environmental Change and Society, Board on Atmospheric Sciences and Climate, Committee to Review the Draft Fourth National Climate Assessment, 2018-05-18 Climate change poses many challenges that affect society and the natural world. With these challenges, however, come opportunities to respond. By taking steps to adapt to and mitigate climate change, the risks to society and the impacts of continued climate change can be lessened. The National Climate Assessment coordinated by the U.S. Global Change Research Program is a mandated report intended to inform response decisions. Required to be developed every four years, these reports provide the most comprehensive and up-to-date evaluation of climate change impacts available for the United States, making them a unique and important climate change document. The draft Fourth National Climate Assessment (NCA4) report reviewed here addresses a wide range of topics of high importance to the United States and society, more broadly extending from human health and community well-being to the built environment to businesses and economies to ecosystems and natural resources. This report evaluates the draft NCA4 to determine if it meets the requirements of the federal mandate: whether it provides accurate information grounded in the scientific literature and whether it effectively communicates climate science impacts and responses for general audiences, including the public, decision makers, and other stakeholders. **Addressing Water Security: Climate Impacts and Adaptation Responses in Africa, Asia, Latin America and the Caribbean** Mishra, Anil, UNESCO, Verbist, Koen, 2021-05-04 *Risk Analysis of Natural Hazards* Paolo Gardoni, Colleen Murphy, Arden Rowell, 2015-10-17 This volume investigates the interdisciplinary and cross-cutting challenges in the risk analysis of natural hazards. It brings together leading minds in engineering, science, philosophy, law, and the social sciences. Parts I and II of this volume explore risk assessment, first by providing an overview of the interdisciplinary interactions involved in the assessment of natural hazards and then by exploring the particular impacts of climate change on natural hazard assessment. Part III discusses the theoretical frameworks for the evaluation of natural hazards. Finally, Parts IV and V address the risk management of natural hazards, providing first an overview of the interdisciplinary interactions underlying natural hazard management and then exploring decision frameworks that can help decision makers integrate and respond to the complex relationships among natural events, the built environment, and human behavior. **Climate Change and Rainfall Extremes in Africa** Victor Ongoma, 2025-04-21 *Climate Change and Rainfall Extremes in Africa: Occurrence, Impacts, and Adaptation* provides the latest developments on extreme rainfall in Africa, along with an analysis of current impacts, future implications, and community adaptations. The book's chapters are organized into three parts: 1. Understanding Rainfall Extremes; 2.

Regional Rainfall and Hydrological Extremes and 3 Prediction Impacts and Adaptation to Rainfall Extremes Specific sections examine rainfall variability in Africa and across the world how climate change has contributed to the increasing severity of events focus on different regions and various meteorological extremes including tropical cyclones drought flooding rising water levels and changes in rainfall concentration Final sections look ahead to the future of forecasting rainfall economic implications damage assessment adaptation community resilience and risk reduction measures This timely resource will deepen readers understanding of how climate change and extreme rainfall in Africa and elsewhere are impacting communities and what can be done to mitigate the effects Provides a conceptual framework that gives readers an interdisciplinary understanding of climate change and rainfall extremes in Africa Includes case studies that offer practical examples and real world data Presents end of chapter summaries that highlight findings and future implications **Water**

Complex models provide inputs to climate risks assessments Projected climate risks present challenges in multiple sectors Climate risk informed decision making can require the use of models with complex dynamics In these models uncertainties can arise from multiple sources including observational data model structures model parameters and projected forcings Neglecting these uncertainties may lead to biased climate risk projections and poor decisions However quantifying these uncertainties and their impacts can be nontrivial This dissertation applies and benchmarks selected existing model diagnostic tools for uncertainty and sensitivity analysis using case studies The first study assesses uncertainties in maize yield projections through a weather yield statistical model This study addresses two questions 1 How does the incorporation of parametric and climate forcing uncertainties change maize yield projections 2 What is the relative importance of these uncertainties on the uncertainties surrounding maize yield projections This study first adopts a pre calibration method to sample the parametric uncertainties and then applies a cumulative sensitivity decomposition method to quantify the impacts of parametric uncertainty and climate forcing uncertainty on maize yield projection variance Considering both uncertainties expands the tail of yield projections Our results show that parametric uncertainty is more important than climate forcing uncertainty The second encompasses ongoing work that seeks to quantify uncertainties of soil and crop related parameters in soil moisture simulation hindcasts and projections from a hydrological model This study focuses on how to sample these uncertainties using limited available soil moisture observations This study applies a pre calibration method similar to the first study to sample plausible soil moisture simulations This is a step towards more comprehensive uncertainty and sensitivity analyses for crop yields and economic projections The third

study benchmarks the performance of different global sensitivity analysis methods for a wide range of model complexities and evaluation times This study addresses two main questions 1 How do model space dimensions and evaluation times influence the choice of a global sensitivity analysis method 2 How do model space dimensions and evaluation times change the estimated computational cost of the fastest sensitivity analysis method This study compares the results and computational costs of four existing global sensitivity analysis methods using polynomial test models with varying model evaluation times and parameter space dimensions The emulation and adaptive sampling methods are faster than the standard Sobol methods for high dimensional or slow models and the Bayesian adaptive spline surface method is fast for most scenarios The pre calibration method is a straightforward approach to sample uncertainties but can have a low sampling efficiency for high dimensional problems The choice of global sensitivity analysis methods depends on nontrivial interactions between the dimensionality of the model s parameter space and model evaluation time These studies can guide the choice of uncertainty and sensitivity analysis methods in climate risk assessments Proper selection and use of these methods can help sample and quantify important model uncertainties with lower computational costs Future work can expand these studies by considering more types of uncertainties more types of models and more uncertainty and sensitivity analysis methods This can improve the understanding and application of different model diagnostic tools in climate risk assessments and relevant decision making
