the Understanding of Team Dynamics in Agile Software Development Through Computer-Aided Sprint Feedback Fabian Kortum,2022-03-15 While modern project management systems support teams during planning and development activities primarily through performance related process information the equally relevant human factors are often

insufficiently considered for explaining team dynamics e.g. the affect of moods in teams. However, understanding team behavioral patterns are crucial for the accurate planning and steady execution of development tasks throughout an ongoing project. A computer aided feedback concept is described unifying interdisciplinary foundations and methods from the software engineering, data science, organizational and social psychology fields for disclosing team dynamics in agile software projects. The concept covers the systematic capture of sociotechnical data combined with descriptive, predictive and exploratory model based methods that support understanding behavioural changes during the development process. Design science from information systems research is used in academic and industrial case studies to conceptualize and operationalize the feedback methods into a practical Jira plugin. A concluding evaluation through an action research method in two industrial software projects results in quantitative and qualitative findings regarding the feedback utilization and utility during agile development processes e.g. team communication changes related to accomplished performances. The case studies underscore the practical relevance for systematic feedback and the need to better understand human factors in software projects.

Agile Software Development with Distributed Teams Jutta Eckstein, 2013-07-15. This is the digital version of the printed book. Copyright 2010. All software projects face the challenges of diverse distances: temporal, geographical, cultural, lingual, political, historical, and more. Many forms of distance even affect developers in the same room. The goal of this book is to reconcile two mainstays of modern agility: the close collaboration agility relies on and project teams distributed across different cities, countries, and continents. In *Agile Software Development with Distributed Teams*, Jutta Eckstein asserts that in fact agile methods and the constant communication they require are uniquely capable of solving the challenges of distributed projects. Agility is responsiveness to change; in other words, agile practitioners maintain flexibility to accommodate changing circumstances and results. Iterative development serves the learning curve that global project teams must scale. This book is not about how to outsource and forget your problems. Rather, Eckstein details how to carefully select development partners and integrate efforts and processes to form a better product than any single contributor could deliver on his or her own. The author de-emphasizes templates and charts and favors topical discussion and exploration. Practitioners share experiences in their own words in short stories throughout the book. Eckstein trains readers to be change agents to creatively apply the concepts in this book to form a customized distributed project plan for success. Topics include: Understanding Distributed Development, The Productivity Myth, Ensuring Conceptual Integrity, Trust and Mutual Respect, Iterations and Releases, Using Features to Steer the Development Effort, Team Velocity, Virtual Retrospectives, Dispersed Synchronization, Introducing Agility to Global Projects, and much more.
