Law, Decision-Making, and Microcomputers Stuart S. Nagel, 1991-02-28 The rise of microcomputers and the power that they've brought have revolutionized nearly every professional discipline not the least of which is the field of law This work presents a survey of microcomputers and decision aiding software in law practices and the legal process offering a variety of perspectives from contributors around the world The book defines decision making software as having the ability to aid in the processing of a set of law related alternatives relative criteria or rules for determining which alternative should or will be chosen and the relationship between each alternative and criterion These basic ideas are applied to the work of various members of the legal community including practicing lawyers legal policy makers and legal scholars Following a detailed introduction that provides an overview of the nature trends and costs benefits of decision making software the book focuses on the different members of the legal community and the normative and predictive questions that microcomputers and software can help to answer Part One deals with the practicing lawyer who must decide whether to go to trial or settle out of court and predicts the outcome of going to trial or the effects of alternative contract clauses The legal policymaker who must decide among alternative statutes and predict the effect of legal policy is addressed in Part Two Topics of discussion here include the role of computers in federal tax compliance and using computers to assist in sentencing Part Three examines the legal scholar and law training covering subjects such as the American legal computer education and using microcomputers in case method teaching Finally Part Four provides analyses that cut across all three parts of the legal profession with special concentration on legal prescription and prediction that apply to a wide variety of legal fields countries and purposes of the law This volume will be of particular interest to practicing lawyers in government and private practice law professors and students and legal researchers and librarians Public academic and law libraries will also find it to be a valuable addition to their collections

**Policy Studies** Stuart S. Nagel, 1988-11-22 Less fragmented than the author's earlier work this book

synthesizes Nagel's perspective on the field of policy analysis. As the field's principal organizer and leading promoter, one is indebted to Nagel for his energy, enthusiasm, and resourcefulness. This volume is itself imbued with such qualities. It covers vast territory, insistently counters the skeptics, and develops original schema for evaluating the work of the field. Furthermore, as vintage Nagel, the book is highly structured with many definitions, lists, and prenamed series of ideas. The author provides numerous hypothetical examples of his points worked out in succinct formulas and terse explanations. Nagel is unswervingly convinced of the correctness of the rationalist perspective and anchors himself firmly in behavioralist political science while accepting the contributions from other social sciences. Not one to qualify a statement or beat around the bush, the author enunciates many guiding principles and values such as effectiveness, efficiency, and equity. Nagel discusses software options for those interested in conducting analysis with microcomputers. He also gives advice on teaching with computers. Important for graduate students and university libraries.

**Choice** The purpose of this work is twofold. First, it attempts to integrate the basic ideas that relate to policy studies. These include the definition of concepts, the establishment of criteria for judging policy studies research, and the clarification of policy goals. Second, the volume proposes to evaluate the methods of policy evaluation themselves and to assess the field as a whole. Designed to serve as a definitive analysis of policy studies, this volume covers basic concepts, research criteria, societal goals, and policy alternatives. It also examines analytic methods, optimizing statistics, quasi-experimentation, behavioralism, multicriteria decision making, evaluation research, legal analysis, and conflicting critiques of the field. It was written for researchers and instructors of public policy studies and will also assist public policy specialists and others interested in the application of social science and other fields of knowledge to important public policy issues.

*Multicriteria Decision-Aid* Philippe Vincke, 1992-07-27 Decision aid Philippe Vincke, Universit Libre de Bruxelles Over the past decade, the discipline of multicriteria decision aid has been extensively developed in the world of mathematics. As its name indicates, multicriteria decision aid aims to give decision makers a tool which should enable them to advance in solving decision problems where several points of view must be taken into account. Written by one of the leading authorities in the field, this book provides a unique introduction to the foundations, models, and methods of multicriteria decision aid. Challenging the monocriteria decision aid approach to problem solving, Vincke presents us with a unique book which deals with preference modelling, the multiple attribute utility theory, the outranking approach, and interactive decision making methods in the same text. Multicriteria Decision aid is directed at graduates and postgraduates studying in the fields of management, operations research, decision analysis, and all those who in business and administration wish to take part in decision making through scientific reasoning.

*Public Administration and Decision-Aiding Software* Stuart S. Nagel, 1990-10-16 This contributed volume offers a summary of the latest ideas and applications concerning decision making software as applied to administrative decision making and public policy making. Stuart Nagel, the editor of this work, defines the essence of decision aiding software to be

software that is designed to enable users to process a set of 1 goals to be achieved 2 alternatives available for achieving them and 3 relations between goals and alternatives in order to choose the best alternative combination allocation or predictive decision rule Containing contributions from both practitioners and theorists this book should be of immediate value to those professionals involved in the field of public administration The book is organized in terms of the major fields of public administration which have been divided into staff procedural activities and into line substantive activities The first part of the book deals with cross cutting procedures including organization theory policy analysis and financial management The second part deals with substantive chapters including criminal justice health environmental energy and transportation as administrative fields The third part of the book involves chapters which combine procedures and substance It includes developmental policy with chapters emphasizing the perspectives of people from developing countries toward the relevance of computers and decision aiding software It also includes the perspective of people from more developed countries trying to apply policy analysis methods to developmental policy The third part also deals with public administration education It emphasizes data banks that are available through telecommunications systems to aid in teaching various aspects of public administration procedures and substance This book should be of interest to public administrators and scholars of the field
