Children's Thinking Robert S. Siegler, 1991 This book brings together major research findings and theories on the development of children's thinking from infancy to adolescence and also considers the subsequent practical implications. It examines the processes through which development occurs as well as the nature of the changes that mark cognitive development in language, perception, memory, conceptual understanding, and problem solving. Theories of cognitive development from Ceci, Halford, Keil, Markman, and Wellman are discussed, and the development of such fundamental concepts as time, space, and mind is explored. Major emphasis is placed on infants' attention and perception in the first days of life, whilst there is thorough exploration of the relation between brain maturation and cognitive development.
