Baron, 2023-09-12 Would you read this book if a computer wrote it Would you even know And why would it matter Today's eerily impressive artificial intelligence writing tools present us with a crucial challenge As writers do we unthinkingly adopt AI's time saving advantages or do we stop to weigh what we gain and lose when heeding its siren call To understand how AI is redefining what it means to write and think linguist and educator Naomi S Baron leads us on a journey connecting the dots between human literacy and today's technology From nineteenth century lessons in composition to mathematician Alan Turing's work creating a machine for deciphering war time messages to contemporary engines like ChatGPT Baron gives readers a spirited overview of the emergence of both literacy and AI and a glimpse of their possible future As the technology becomes increasingly sophisticated and fluent it's tempting to take the easy way out and let AI do the work for us Baron cautions that such efficiency isn't always in our interest As AI plies us with suggestions or full blown text we risk losing not just our technical skills but the power of writing as a springboard for personal reflection and unique expression Funny informed and conversational Who Wrote This urges us as individuals and as communities to make conscious choices about the extent to which we collaborate with AI The technology is here to stay Baron shows us how to work with AI and how to spot where it risks diminishing the valuable cognitive and social benefits of being literate **Art and AsiaPacific**, 2009 **A Thinker's Guide to Effective Writing** William T. **Architect and Engineer of California**, 1914 **Everyday Chaos** David Weinberger, 2019-04-23 Make More Future Artificial intelligence big data modern science and the internet are all revealing a fundamental truth The world is vastly more complex and unpredictable than we've allowed ourselves to see Now that technology is enabling us to take advantage of all the chaos it's revealing our understanding of how things happen is changing and with it our deepest strategies for predicting preparing for and managing our world This affects everything from how we approach our everyday lives to how we make moral decisions and how we run our businesses Take machine learning which makes better predictions about weather

medical diagnoses and product performance than we do but often does so at the expense of our understanding of how it arrived at those predictions While this can be dangerous accepting it is also liberating for it enables us to harness the complexity of an immense amount of data around us We are also turning to strategies that avoid anticipating the future altogether such as A B testing Minimum Viable Products open platforms and user modifiable video games We even take for granted that a simple hashtag can organize unplanned leaderless movements such as MeToo Through stories from history business and technology philosopher and technologist David Weinberger finds the unifying truths lying below the surface of the tools we take for granted and a future in which our best strategy often requires holding back from anticipating and instead creating as many possibilities as we can The book's imperative for business and beyond is simple Make More Future The result is a world no longer focused on limitations but optimized for possibilities The Economist, 1843 Blueprint, 2009
