The Designer's Field Guide to Collaboration Caryn Brause, 2016-11-18 The

Designer's Field Guide to Collaboration provides practitioners and students with the tools necessary to collaborate effectively with a wide variety of partners in an increasingly socially complex and technology driven design environment. Beautifully illustrated with color images, the book draws on the expertise of top professionals in the allied fields of architecture, landscape architecture, engineering, and construction management and brings to bear research from diverse disciplines such as software development, organizational behavior, and outdoor leadership training. Chapters examine emerging and best practices for effective team building, structuring workflows, enhancing communication, managing conflict, and developing collective vision, all to ensure the highest standards of design excellence. Case studies detail and reflect on the collaborative processes used to create award-winning projects by Studio Gang, Perkins+Will, Tod Williams Billie Tsien Architects, Partners Gensler, CDR Studio, Mahlum Architects, In-Site Architecture, and Thornton Tomasetti's Core Studio. The book also provides pragmatic ideas and formal exercises for brainstorming, productively evaluating ideas, communicating effectively, and offering feedback. By emphasizing the productive influence and creative possibilities of collaboration within the changing landscape of architectural production, the book proposes how these practices can be taught in architecture school and expanded in practice. In a changing world that presents increasingly complex challenges, optimizing these collaborative skills will prove not only necessary but crucial to the process of creating advanced architecture.

Fast Track to the Top Ros Taylor, John Humphrey, 2002. *Fast Track to the Top* guides you through practical programmes based on the 10 Key Skills common to successful people, enabling you to profile your personal skills, assess your potential, and learn how to achieve your goals.

Regreening the Built Environment Michael A. Richards, 2024-09-18. Now in its second volume, *Regreening the Built Environment* provides an overview of physical and social environmental challenges that the planet is facing and presents solutions that restore ecological processes, reclaim open space, foster social equity, and facilitate a green economy. Healing the planet requires a combination of strategies networked across multiple scales of development, including buildings, sites, communities, and regions. Case studies from a range of locations in the United States, Denmark, Vietnam, Germany, South Korea, Switzerland, France, and the United Kingdom, among others, demonstrate how existing gray infrastructure can be retrofitted with green infrastructure and low-impact development techniques. From this, the author shows how a building can be designed that creates greenspace or generates energy; likewise, a roadway can be a parkway, an alley can be a wildlife corridor, and a parking surface can be a garden. This new edition also includes case studies that have successfully reconnected communities that were fragmented by unjust planning practices and irresponsible patterns of development; resilient design solutions in response to natural disasters; passive design strategies that can make interior spaces more efficient and healthier; and expanded discussions on capturing carbon, renewable energy, agriculture, waste, public transit, and adaptive reuse, including innovative ideas on how to reimagine the shopping mall in the era of e-commerce. The strategies presented in this book will stimulate discussions within the design profession and will be of great interest to students and
