 By focusing on knowledge based systems technology the primary purpose and goal of this book is to improve the quality of
 reference service rendered in libraries Within reference service this book examines question answering a complex and
 difficult task For those interested in the theoretical aspects of reference work they have to look no further than the first
 chapter In addition the book features theoretical chapters on modelling the reference transaction a chapter on the logic of
 ready reference work and a chapter on the appropriate criteria to apply in selecting an expert system shell Several practical
 chapters focus on what KBS work has already been done in the field and evaluate nearly fifty expert system development
 shells so that readers can select the most appropriate shell for their domain The subtitle of the book is applications problems
 and progress in regard to expert systems in reference work Applications are covered most clearly in chapter 8 which reviews
 the more than extant prototypes Chapter 3 covers what is feasible chapter 4 models the reference transaction and chapter 7
 covers interface issues so that future applications can be more successful Problems are covered throughout the book starting
 with chapter 1 which discusses the traditional emphasis on reference sources It argues that the field needs to shift toward
 procedural knowledge related to work in reference departments The chapter on expert system feasibility reveals that there
 are alternative ways of conceptualizing the intellectual work of an expert and of course chapter 9 directly points out
 limitations in extant systems Encouraging words occur in chapter 1 about the shift to a balanced or complete paradigm for
 doing reference work Similarly the chapter on modelling is optimistic in that reference work can be modelled and systems
 implemented which act like human experts The final chapter tries to avoid the technological optimism inherent in many
 books on expert systems by identifying the near term factors which will influence the development of expert systems Key
 Features Historical background presenting the field s paradigmatic thinking Decision trees for basic formats of reference
