**Born-Digital Texts in the English Language Classroom** Saskia

Kersten,Christian Ludwig,2024-06-11 This book is the first to focus specifically on born digital texts in EFL teaching uniting international and innovative scholarship with practical classroom applications The book develops a theoretically sound framework for curriculum materials and methods design that takes into account the growing ubiquity of born digital texts in the digital age It covers a broad variety of born digital text types including those generated by AI which so far have not been an explicit focus in the context of language teaching while also providing a grounding in current discussions around digital tools in education The chapters cover a wide range of issues from methodological approaches to born digital texts to curriculum syllabus and materials design The book will be a valuable introduction to the subject for trainee and practising teachers as well as teacher educators and students on EFL courses Chapter 7 is free to download as an open access publication under a CC BY licence and is available here <https://zenodo.org/records/11174197>

**Artificial Intelligence and Universal Values** Jay Friedenber,2024-07-14 The field of value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans There are a large

number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning When making a decision an agent is supposed to maximize the expected utility of its value function Classically this has been referred to as happiness but this is just one of many things that people value In order to resolve this issue we need to determine a set of human values that represent humanity's interests Although this problem might seem intractable research shows that people of various cultures and religions actually share more in common than they realize In this book we review world religions moral philosophy and evolutionary psychology to elucidate a common set of shared values We then show how these values can be used to address the alignment problem and conclude with problems and goals for future research The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem These people will come from various professions and include philosophers computer programmers and psychologists as the problem itself is multi disciplinary
