Action Research For Climate Change Adaptation Developing And Applying Knowledge For Governance Routledge Advances In Climate Change Research:

Action Research for Climate Change Adaptation Arwin van Buuren, Jasper Eshuis, Mathijs van Vliet, 2014-12-17

Governments all over the world are struggling with the question of how to adapt to climate change. They need information not only about the issue and its possible consequences but also about feasible governance strategies and instruments to combat it. At the same time, scientists from different social disciplines are trying to understand the dynamics and peculiarities of the governance of climate change adaptation. This book demonstrates how action-oriented research methods can be used to satisfy the need for both policy-relevant information and scientific knowledge. Bringing together eight case studies that show inspiring practices of action research from around the world, including Australia, Denmark, Vietnam, and the Netherlands, the book covers a rich variety of action research applications, running from participatory observation to serious games and role-playing exercises. It explores many adaptation challenges, from flood risk, safety, to heat stress and freshwater availability, and draws out valuable lessons about the conditions that make action research successful, demonstrating how scientific and academic knowledge can be used in a practical context to reach useful and applicable insights. The book will be of interest to scholars and students of climate change, environmental policy, politics, and governance.

Community Action and Climate Change Jennifer Kent, 2015-11-19. The failure of recent international negotiations to progress global action on climate change has shifted attention to the emergence of grassroots sustainability initiatives. These civil society networks display the potential to implement social innovation and change processes from the bottom up. Recent scholarship has sought to theorise grassroots, community-based, low-carbon practices in terms of their sustainability transition potential. However, there are few empirical examples that demonstrate the factors for success of community-based social innovations in achieving more widespread adoption outside of their local sustainability niche. The book seeks to address two significant gaps related to grassroots climate action: firstly, the continuing dominance of the individualisation of responsibility for climate change action, which presupposes that individuals hold both the ability and desire to shift their behaviours and lifestyle choices to align with a low-carbon future; secondly, the potential for community-based collectives to influence mainstream climate change governance, an area significantly under-researched. Drawing on empirical research into Australian Climate Action Groups (CAGs) and related international research, the book argues that grassroots, community-based collective action on climate change holds the key to broader social change. This book will be of great interest to students and scholars of climate change, citizen participation, environmental sociology, and sustainable development.

Strategies for Rapid Climate Mitigation Laurence Delina, 2016-06-10. To keep the global average temperature from rising further than 2°C, emissions must peak soon and then fall steeply. This book examines how such rapid mitigation can proceed in the scale and speed required for effective climate action, using an analogy provided by the mobilisation for a war that encompassed nations: the Second World War.

Strategies for Rapid Climate Mitigation examines the wartime climate analogy by drawing lessons from wartime mobilisations to develop contingency plans for a scenario where governments implement stringent mitigation programs as an insurance policy where we pay for future benefits Readers are provided a picture of how these programs could look how they would work what could trigger them and the challenges in execution The book analyses in detail one plausible approach to a crucial issue an approach built upon knowledge of climate science and on proven and demonstrated mitigation measures The book is meshed with a social and political analysis that draws upon narratives of mobilisations during the war to meet a transnational threat while also addressing the shortcomings of the analogy and its strategies The book will be of great interest to scholars students and practitioners of public policy climate policy energy policy international relations and strategic studies

Climate Change, Education, and Technology Menşure Alkış Küçükaydın, Hakan Ulum, Ömer Gökhan Ulum, 2024-11-25 The climate change crisis is the greatest challenge humanity has ever confronted As human activities are the most significant cause for this crisis the solution must come from within humanity While global movements NGOs universities municipal governments etc are doing their part to combat the crisis the role of education and technology cannot be emphasized enough Education is necessary to enhance awareness especially among the youth generate solutions and implement them Technology contributes to this process by creating climate change fighting solutions accumulating and analysing data and providing energy efficiency Technology also enables the monitoring of the climate the mitigation of its effects and the enhancement of the environment Therefore climate change education and the use of technology should be addressed as a unit In this volume the authors integrate climate change education and technological applications This book is comprehensive and offers readers a variety of perspectives encouraging the generation of novel and inventive ideas The collaboration of authors from various disciplines to address the issue brings about novel and intriguing perspectives
