kits Topics covered

- 1 Behavior This section includes robots designed to interact with the environment or with other robots Behavior is the key word as the robots are designed to behave in some specific way and all the technical details and implementations are secondary to this main goal
- 2 Motion The projects in this category are aimed at solving some specific motion problem The focus of these robots is on the mechanical techniques rather than on software
- 3 Interaction These projects allow the reader to build robots for the purpose of interacting with the user by playing games or responding to user commands in real time
- 4 Automation Opposite of the previous category this one hosts robots designed to perform totally automated operations These projects will build robots able to complete tasks without human intervention
- 5 Calculus The most abstract of the sections contain robots with minimum knowledge of the external world Pneumatic ALUs and Turning machines are fully explained Advanced users need inspiration too Advanced projects with suggestions for enhancements and improvements make the explanations of the theories and physics of the robots as well as the complete building instructions make this book extremely useful to readers long after the building of the robots has been completed

Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps. The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities. It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action: 1 computational identity which shows the importance of young people's development of scientific identity for future STEM growth and 2 digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways. Covering subthemes including student competency and assessment programming education and teacher and mentor development this book is ideal for teachers instructional designers educational technology developers school administrators academicians researchers and students.
