Innovative Strategies for Enhancing Crop Resilience Against Plant Viral Diseases Chellappan Padmanabhan, Fuh-Jyh Jan, 2025-03-14 Plant virus diseases represent a significant challenge in the field of agricultural science impacting crop productivity and causing substantial economic losses globally As the world population continues to grow the demand for increased crop yields intensifies necessitating innovative solutions to safeguard food security Traditional breeding methods while effective are often time consuming and labor intensive Recent advancements in molecular breeding genome sequencing and pathogen identification technologies have opened new avenues for enhancing

crop resilience against viral pathogens Despite these advancements there remain critical gaps in our understanding of plant virus interactions the mechanisms of viral pathogenesis and the development of effective control strategies Addressing these gaps is essential for ensuring sustainable agricultural practices and food security This Research Topic aims to explore the pathogenesis of plant viruses advanced detection methods and innovative control strategies to protect crops from viral diseases The primary objective is to foster research that delves into the molecular mechanisms of plant virus interactions the development of precise diagnostic tools and the application of cutting edge technologies such as genome editing for disease resistance By answering key questions and testing hypotheses related to these areas the research seeks to contribute to the development of robust strategies for managing plant viral diseases
