Helical Staircase Design And Analysis In Rcc:

Staircases - Structural Analysis and Design M.Y.H. Bangash, T. Bangash, 1999-01-01 In recent years both free standing and geometric staircases have become quite popular. Many variations exist such as spiral helical and elliptical staircases and combinations of these. A number of researchers have come forward with different concepts in the fields of analytical and numerical design and of experimental methods and assessments. The aim of this book is to cover all these methods and to present them with greater simplicity to practising engineers. Staircases is divided into five chapters: Specifications and basic data on staircases; Structural analysis of staircases: Classical methods; Structural analysis of staircases: Modern methods; Staircases and their analysis: A comparative study; Design analysis and structural detailing. Charts and graphs are included and numerous design examples are given of freestanding and other geometric staircases and of their elements and components. These examples are related to the case studies which were based on staircases that have already been constructed. All examples are checked using various Eurocodes. The book includes bibliographical references and is supported by two appendices which will be of particular interest to those practising engineers who wish to make a comparative study of the different practices and code requirements used by various countries. Detailed drawings are included from the USA, Britain, Europe and Asia. Staircases will serve as a useful text for teachers preparing design syllabi for undergraduate and post graduate courses. Each major section contains a full explanation which allows the book to be used by students and practising engineers, particularly those facing the formidable task of having to design detail complicated staircases with unusual boundary conditions. Contractors will also find this book useful in the preparation of construction drawings and manufacturers will be interested in the guidance given in the text. *Limit State Design of Reinforced Concrete* B. Staircases which today are equally the responsibility of joiners The increasing demand for textbooks on the techniques of stair and carpenters have had a varied history over the last thirty construction is due to two main factors years Until 1945 nearly all staircases even those in large residential blocks were made of wood Because of the amount of 1 The relatively small dwellings that were built twenty to thirty destruction that took place during the war new building regulations years ago are no longer regarded as acceptable New regulations frequently stipulated nonflammable materials for almost all dwellings concerning noise and heat insulation as well as government aid available to finance such projects have in addition This resulted in a decline in the quality of stair construction condition stimulated the rebuilding and thus the design of more what is more fewer and fewer craftsmen were trained for this generously proportioned dwellings including of course rewarding and varied branch of woodworking craftsmanship staircases This is a regrettable development since good stair builders must combine the design capabilities and three dimensional approach 2 The style of living has changed The time when sober interiors of the carpenter with the exact and neat craftsmanship of the joiners were the order of the day has gone Excessive nostalgic interiors Techniques of Staircase Construction therefore provides welcome reversal to previous styles has also passed
