Middleware Solutions for Wireless Internet of Things Paolo Bellavista, Carlo Giannelli, Sajal K. Das, Jiannong Cao, 2019-07-15 The proliferation of powerful but cheap devices together with the availability of a plethora of wireless technologies has pushed for the spread of the Wireless Internet of Things WIoT which is typically much more heterogeneous dynamic and general purpose if compared with the traditional IoT The WIoT is characterized by the dynamic interaction of traditional infrastructure side devices e.g. sensors and actuators provided by municipalities in Smart City infrastructures and other portable and more opportunistic ones such as mobile

smartphones opportunistically integrated to dynamically extend and enhance the WIoT environment A key enabler of this vision is the advancement of software and middleware technologies in various mobile related sectors ranging from the effective synergic management of wireless communications to mobility adaptivity support in operating systems and differentiated integration and management of devices with heterogeneous capabilities in middleware from horizontal support to crowdsourcing in different application domains to dynamic offloading to cloud resources only to mention a few The book presents state of the art contributions in the articulated WIoT area by providing novel insights about the development and adoption of middleware solutions to enable the WIoT vision in a wide spectrum of heterogeneous scenarios ranging from industrial environments to educational devices The presented solutions provide readers with differentiated point of views by demonstrating how the WIoT vision can be applied to several aspects of our daily life in a pervasive manner *Mobile and Handheld Computing Solutions for Organizations and End-Users* Hu, Wen-Chen, 2013-01-31 *Mobile and Handheld Computing Solutions for Organizations and End Users* discusses a broad range of topics in order to advance handheld knowledge and apply the proposed methods to real world issues for organizations and end users This book brings together researchers and practitioners involved with mobile and handheld computing solutions useful for IT students researchers and scholars

Optimizing HPC Applications with Intel Cluster Tools Alexander Supalov, Andrey Semin, Christopher Dahnken, Michael Klemm, 2014-10-09 *Optimizing HPC Applications with Intel Cluster Tools* takes the reader on a tour of the fast growing area of high performance computing and the optimization of hybrid programs These programs typically combine distributed memory and shared memory programming models and use the Message Passing Interface MPI and OpenMP for multi threading to achieve the ultimate goal of high performance at low power consumption on enterprise class workstations and compute clusters The book focuses on optimization for clusters consisting of the Intel Xeon processor but the optimization methodologies also apply to the Intel Xeon Phi coprocessor and heterogeneous clusters mixing both architectures Besides the tutorial and reference content the authors address and refute many myths and misconceptions surrounding the topic The text is augmented and enriched by descriptions of real life situations **Computer Architecture** Gérard Blanchet, Bertrand Dupouy, 2013-01-24 This book lays out the concepts necessary to understand how a computer works For reasons of clarity the authors have deliberately chosen examples that apply to machines from all eras without having to water down the contents of the book This choice helps to show how techniques concepts and performances have evolved since the first computers The book is divided into five parts The first four which are of increasing difficulty are the core of the book Elements of a Basic Architecture Programming Model and Operation Memory Hierarchy Parallelism and Performance Enhancement The final part provides hints and solutions to the exercises in the book as well as appendices The reader may approach each part independently based on their prior knowledge and goals *Web Engineering and Peer-to-Peer Computing* Enrico Gregori, Ludmila Cherkasova, Gianpaolo Cugola, Fabio Panzieri, Gian P. Picco, 2003-06-30 This

book constitutes the refereed proceedings of the two thematic workshops held jointly with Networking 2002 WEB Engineering and Peer to Peer Computing Networking 2002 was organized by the Italian National Research Council CNR and was sponsored by the IFIP working groups WG 6.2 Network and Internetwork Architectures WG 6.3 Performance of Communication Systems and WG 6.8 Wireless Communications The program of the conference covered five days and included the main conference three days two tutorial days and one day of thematic workshops

The International Workshop on Web Engineering was dedicated to the discussion of the principal issues that emerge in the design and implementation of large scale complex Web based systems Scalability issues pose a number of challenging problems to solve for both applications and the underlying web network infrastructure On one hand web services and internet applications must take into account network performance and transport protocol design to achieve acceptable performance and robustness On the other hand emerging network and Web technologies are determined by the requirements of these applications Fifteen papers were presented that illustrated the current state of the art in this area In addition to the authors of these papers the Workshop on Web Engineering was attended by about thirty participants who contributed to the workshop by stimulating fruitful discussions at the end of each presentation Thus this workshop provided an excellent opportunity for researchers from both industry and academia to gather exchange ideas and discuss recent results in the development of Web based systems and emerging Internet applications

Computer Architecture Subrata Dasgupta, 1989 Advances in the Internet of Things Qusay Hassan, 2025-07-17 Many reports estimated that in 2024 the number of Internet of Things IoT devices exceeded 18 billion worldwide with predictions suggesting that it could reach nearly 40 billion by 2033 Despite primarily being consumer devices a growing number of them will find use in industrial and enterprise applications This shows the significance of IoT and how it shapes the future However to realize its full potential we must address its emerging challenges and highlight recent applications advances and trends which is the focus of this book Security and privacy represent some of the key challenges IoT adopters face The severity of these issues is exacerbated by the growing number of IoT devices the expansion of Industry 4.0 and the emergence of Industry 5.0 and the significant increase in cybersecurity attacks Considering that ensuring security and privacy is crucial for the successful adoption of IoT this book dedicates several chapters to these areas This book also introduces some novel models that improve IoT environments and presents several practical implementations that utilize IoT to demonstrate some of its real world applications Furthermore it examines several emerging technologies that enable the realization of advanced IoT environments We see most IoT advances in three main areas the integration of artificial intelligence machine learning network technologies and hardware design Therefore this book dedicates several chapters to these areas Most chapters touch on artificial intelligence machine learning emphasizing the significance of these technologies in today's and next generation applications The main objective of this book is to capture the state of the art in IoT and explore some of its

emerging challenges solutions and technologies This peer reviewed book serves as a reference for researchers academics practitioners and graduate level students
