

Holt Physics Chapter 6 Momentum Activity Sheet

The graphing calculator can be programmed with the equation

$$Y_1 = M(F-I)/X$$

to produce a graph of force (Y_1) vs. time interval (X). Note that in the equation for Y_1 that F is the final velocity (not force) and I is the initial velocity. In this graphing calculator activity, you will determine the force that must be exerted to change the momentum of an object in different time intervals. You will learn the relationship between time and force, and the importance of the sign of the force and the velocity.

Download the MOM program to your TI-83/84 calculator. Press **PRGM**, then scroll down to MOM by pressing **▾**. Press **ENTER** twice to start the program. Enter the values for mass, initial velocity, and final velocity (see below). The calculator will produce a graph of force vs. time interval. Use **TRACE** to determine the required forces at particular time intervals. Press **2nd****QUIT** to stop viewing the graph. Press **ENTER** to restart the program.

- a. The equation used by the calculator can also be derived from another equation that relates force and mass. What is this equation?

Determine the force that must be exerted on a 0.43 kg soccer ball in a given time interval to cause the changes in momentum in the following situations. Note that when entering negative values on the calculator use the **⊖** key, instead of the **□** key.

- b. the ball slows from 15 m/s to 0 m/s in 0.025 s
- c. the ball slows from 15 m/s to 0 m/s in 0.25 s
- d. the ball speeds up from 0 m/s to 15 m/s in 0.25 s
- e. the ball speeds up from 5.0 m/s in the $+x$ direction to 22 m/s in the opposite direction in 0.55 s
- f. the ball speeds up from 5.0 m/s in the $-x$ direction to 22 m/s in the opposite direction in 0.55 s
- g. Increasing the time interval _____ (increases or decreases) the magnitude of the force necessary to bring about a specific change in the momentum.
- h. The sign of the force depends on the _____ and _____ of the initial and final velocities.
