cation were encouraged Consequently a small collection of papers describe attempts to analyze and verify programs written in conventional programming languages Solutions include translations from source code to Promela as well as specially designed model checkers that accept source code We believe that this is an interesting research direction for the formal methods community and that it will result in a new set of challenges and solutions Of course abstraction becomes the key solution to deal with very large state spaces However we also see potential for integrating model checking with techniques such as static program analysis and testing Papers on these issues have therefore been included in the proceedings **ECAI**
