**ADTs, Data Structures, and Problem Solving with C++** Larry R. Nyhoff, 2005 **Data Abstraction and Problem Solving with C++** Frank M. Carrano, 1995 This work provides novice and professional programmers with a bridge from traditional programming methods to the object oriented techniques available in C It clearly explains encapsulation and C classes which are then used throughout to implement abstract data types such as lists stacks queues trees and tables Inheritance polymorphism templates and operator overloading are explained both conceptually and through examples The work offers early extensive coverage of recursion and uses the technique through many examples and exercises It sets out to provide a firm foundation in data abstraction emphasizing the distinction between specification and implementation

**Data Abstraction and Problem Solving with C++** Frank M. Carrano, Paul Helman, Robert Veroff, 1998 Focusing on data abstraction and data structures the second edition of this very successful book continues to emphasize the needs of both the instructor and the student The book illustrates the role of classes and abstract data types ADTs in the problem solving process as the foundation for an object oriented approach Throughout the text the distinction between specification and implementation is continually stressed The text covers major applications of ADTs such as searching a flight map and performing an event driven simulation It also offers early extensive coverage of recursion and uses this technique in many examples and exercises Overall the lucid writing style widespread use of examples and flexible coverage of material have helped make this a leading book in the field

Carrano,2007 The classic best selling Data Abstraction and Problem Solving with C Walls and Mirrors book provides a firm foundation in data abstraction that emphasizes the distinction between specifications and implementation as the basis for an object oriented approach This new edition offers the latest C features and an introduction to using Doxygen a documentation generator for C enhanced coverage of Software Engineering concepts and additional UML diagrams Frank's Making it Real blog <http://frank.m.carrano.com> blog extends his textbooks and lectures to a lively discussion with instructors and students about teaching and learning computer science Follow Frank on Twitter [http://twitter.com/Frank\\_M\\_Carrano](http://twitter.com/Frank_M_Carrano) Find him on Facebook <https://www.facebook.com/makingitreal>

**Structured and Object-oriented Problem Solving Using C++** Andrew C. Staugaard,2002 Welcome to the third edition of my C text The highly successful first edition was one of the first textbooks available for teaching C in the first programming course The text was introduced at the 1994 ACM Conference in Phoenix when many were arguing the virtues of teaching C and OOP versus Pascal and structured programming in the first programming course I argued at the time and still argue that students need to be taught problem solving early on using both the structured and object oriented paradigms and because of its hybrid nature C is the only language suited to learning both of these paradigms Since then many institutions have made the switch from Pascal to C for just this reason as well as the intense industry support for C language As a result this third edition continues to provide an introduction to both structured and object oriented problem solving techniques using the C language Of course many improvements have been made based on using the text in numerous classrooms all over the world since 1994 As with earlier editions the text starts from the beginning assuming no previous knowledge of C or any other programming language This text is appropriate for any introductory programming CS1 course using the C language as well as experienced programmers wanting an introduction to structured and object oriented problem solving techniques using the C language Book Preface

**Algorithms, Data Structures, and Problem Solving with C++**. 2000 **Understanding Programming and Problem Solving with C++** Kenneth A. Lambert,Douglas W. Nance,1996 This text features a gradual approach to object oriented programming that covers problem solving and algorithm development but also offers solid grounding in objects and classes Problem solving is emphasized throughout the text through numerous exercises

programming problems and projects     **C++** Larry R. Nyhoff,1999 Emphasizing abstract data types ADTs throughout this work covers the containers and algorithms from the Standard Template Library introducing the most up to date and powerful tools in C     **Data Abstraction & Problem Solving with C++** Frank M. Carrano,Timothy M. **Programming and Problem Solving with C++** Nell B. Dale,Chip Weems,Mark R. Headington,2002 This book continues to reflect our experience that topics once considered too advanced can be taught in the first course The text addresses metalanguages explicitly as the formal means of specifying programming language syntax     Data Structures and Abstraction Using C Geoff Whale,1996     **Problem Solving, Abstraction, and Design Using C++** Frank L. Friedman,Elliot B. Koffman,Robin Koffman,1999 This best selling text now includes coverage of the AP string class and apvectors As with the original this book stresses problem solving techniques while introducing students to object oriented concepts early The system defined string and stream classes and a user defined money class are used to reinforce the importance of data modeling in programming The vector version contains all of the classic learning features readers have come to know and trust in authors Frank Friedman and Elliot Koffman These features include case studies program style sections syntax display boxes end of section exercises common error sections chapter reviews quick check exercises and programming projects High school teachers If you are interested in using this text for your Advanced Placement Computer Science course please send your name and address to c ap awl com for more information This book will come bundled with Addison Wesley s Review for the Computer Science AP Exam in C High Schools ordering this book should use the following ISBN 0 201 35761 5 0201357569B04062001     *Data Structures and Problem Solving Using C++* Mark Allen Weiss,2000

Experienced author and teacher Mark Allen Weiss now brings his expertise to the CS2 course with *Algorithms Data Structures and Problem Solving with C* which introduces both data structures and algorithm design from the viewpoint of abstract thinking and problem solving The author chooses C as the language of implementation but the emphasis of the book itself remains on uniformly accepted CS2 topics such as pointers data structures algorithm analysis and increasingly complex programming projects *Algorithms Data Structures and Problem Solving with C* is the first CS2 textbook to clearly separate the interface and implementation of data structures The interface and running time of data structures are presented first and students have the opportunity to use the data structures in a host of practical examples before being introduced to the implementations This unique approach enhances the students ability to think abstractly     *Problem Solving with C++*

Walter J. Savitch,2005     ***Fundamentals of C++ and Data Structures, Advanced Course*** Kenneth Alfred Lambert,Thomas L. Naps,2001 Following the success of *Fundamentals of Program Design and Data Structures* by Lambert and Naps *C Advanced Course* is essential for a second course in Computer Science Completely updated this text provides in depth coverage to help students prepare for the AP exam Exam AB A full introduction to the essential features of C is provided and programming techniques are emphasized in the context of interesting and realistic case problems This text is compatible with C compilers from Microsoft Borland and Metrowerks     *Algorithms, Data Structures, and Problem Solving with C++* Mark Allen Weiss,1996 Providing a complete explanation of problem solving and algorithms using C the author s theoretical perspective emphasizes software engineering and object oriented programming and encourages readers to think abstractly Numerous code examples and case studies are used to support the algorithms presented
