Posamentier and Stephen Krulik present ten basic strategies that are effective for finding solutions to a wide range of mathematics problems. These tried and true methods, including working backwards, finding a pattern, adopting a different point of view, solving a simpler analogous problem, and making a visual representation, make problem solving easier, neater, and more understandable for students as well as teachers. Providing numerous sample problems that illustrate how mathematics teachers and specialists can incorporate these techniques into their mathematics curriculum, this updated edition also includes a variety of new problems that show how to use the strategies. References to current NCTM standards. Solutions to the problems in each chapter. Extensive discussions of the empowering strategies used to solve sample problems.
