**Advantages of Parallel Processing and the Effects of Communications Time** ,2000 Advantages of Parallel Processing and the Effects of Communications Time National Aeronautics and Space Administration (NASA),2018-06-15 Many computing tasks involve heavy mathematical calculations or analyzing large amounts of data These operations can take a long time to complete using only one computer Networks such as the Internet provide many computers with the ability to communicate with each other Parallel or distributed computing takes advantage of these networked computers by arranging them to work together on a problem thereby reducing the time needed to obtain the solution The drawback to using a network of computers to solve a problem is the time wasted in communicating between the various hosts The application of distributed computing techniques to a space environment or to use over a satellite network would therefore be limited by the amount of time needed to send data across the network which would typically take much longer than on a terrestrial network This experiment shows how much faster a large job can be performed by adding more computers to the task what role communications time plays in the total execution time and the impact a long delay network has on a distributed computing system Eddy Wesley M and Allman Mark Glenn Research Center NASA CR 2000 209455 E 11953 NAS 1 26 209455 **The Dawn of Massively Parallel Processing in Meteorology** Geerd-R.
