Modern Compiler Design Dick Grune, Kees van Reeuwijk, Henri E. Bal, Criel J.H. Jacobs, Koen Langendoen, 2012-07-20 Modern Compiler Design makes the topic of compiler design more accessible by focusing on principles and techniques of wide application By carefully distinguishing between the essential material that has a high chance of being useful and the incidental material that will be of benefit only in exceptional cases much useful information was packed in this comprehensive volume The student who has finished this book can expect to understand the workings of and add to a language processor for each of the modern paradigms and be able to read the literature on how to proceed The first provides a firm basis the second potential for growth The Cache Coherence Problem in Shared-Memory Multiprocessors Igor Tartalja, Veljko Milutinović, 1996-02-13 Almost all software solutions are developed through academic research and implemented only in prototype machines leaving the field of software techniques for maintaining the cache coherence widely open for future research and development This book is a collection of all the representative approaches to software coherence maintenance including a number of related efforts in the performance evaluation field The book presents a selection of 27 papers dealing with state of the art software solutions for cache coherence maintenance in shared memory multiprocessors It begins with a set of four introductory readings that provides a brief overview of the cache coherence problem and introduces software solutions to the problem The text defines and illustrates static and dynamic software schemes techniques for modeling performance evaluation mechanisms and performance evaluation studies The book is intended for the experienced reader in computer engineering but possibly a novice in the topic of cache coherence It also

provides an in depth understanding of the problem as well as a comprehensive overview for multicomputer designers computer architects and compiler writers In addition it is a software coherence reference handbook for advanced undergraduate and typical graduate students in multiprocessing and multiprogramming areas

Recent Advances in Parsing Technology H. Bunt, Masaru Tomita, 1996-08-31 In Marcus 1980 deterministic parsers were introduced These are parsers which satisfy the conditions of Marcus's determinism hypothesis i e they are strongly deterministic in the sense that they do not simulate non determinism in any way In later work Marcus et al 1983 these parsers were modified to construct descriptions of trees rather than the trees themselves The resulting D theory parsers by working with these descriptions are capable of capturing a certain amount of ambiguity in the structures they build In this context it is not clear what it means for a parser to meet the conditions of the determinism hypothesis The object of this work is to clarify this and other issues pertaining to D theory parsers and to provide a framework within which these issues can be examined formally Thus we have a very narrow scope We make no arguments about the linguistic issues D theory parsers are meant to address their relation to other parsing formalisms or the notion of determinism in general Rather we focus on issues internal to D theory parsers themselves

Compiler Techniques for MATLAB Programs Luiz Antonio De Rose, University of Illinois at Urbana-Champaign.

Department of Computer Science, 1996 Abstract This thesis addresses the issues of translating an interactive array language such as MATLAB into a traditional compiled language such as Fortran in order to achieve better performance. It describes the main techniques developed for our MATLAB to Fortran 90 compiler to extract information from the high level semantics of MATLAB for the generation of high performance code. To perform the translation an inference mechanism is necessary to generate the declarations for a typed language to select the appropriate functions and operations and to allocate the necessary space. The inference mechanism developed for this MATLAB to Fortran 90 compiler combines static and dynamic inference methods for intrinsic type shape rank and structural inference. This inference is enhanced with value propagation and symbolic dimension propagation analyses. The experimental results which compare compiled generated programs with the corresponding interpreted MATLAB execution show that the compiler can generate code that performs more than 1000 times faster than MATLAB on an SGI Power Challenge and as fast as the corresponding hand written Fortran 90 programs. When compared with the performance of C MEX files generated by the MathWorks MATLAB compiler we observed that for our tests the Fortran 90 programs ran faster than the corresponding C MEX programs on an SGI Power Challenge and on a Sun SPARCstation 10. This better performance is mainly attributed to our enhanced inference mechanism **ACM SIGPLAN**
