

Quadratic Inequalities

Quadratic inequalities are similar to quadratic equations and when plotted they display a parabola. Solving a quadratic inequality gives a range of solutions.

 **Example** Solve $x^2 + 6x + 5 < 0$

Factorising gives $(x + 1)(x + 5) < 0$, so the graph crosses the x axis at -1 and -5 . We want the x values when the graph is less than 0 , i.e. where the curve is below the x axis.

The solution to this inequality is written as $-5 < x < -1$.

If instead we had $x^2 + 6x + 5 > 0$:

We want the x values when the graph is **greater than** 0 ,
i.e. where the curve is **above** the x axis.

The solution is written as two inequalities $x > -1$ and $x < -5$.
