This book achieves these goals by exposing new concepts incrementally while building on previously covered topics. Furthermore, we use the Python programming language as we believe that provides the perfect setting for exploring these ideas. We cover abstract data types and data structures, writing algorithms and solving problems. We look at a number of data structures and solve classic problems that arise. The tools and techniques that you learn here will be applied over and over as you continue your study of computer science. This textbook has three key features: A strong focus on problem solving introduces students to fundamental data structures and algorithms by providing a very readable text without introducing an overwhelming amount of new language syntax. Algorithm analysis in terms of Big O running time is introduced early and applied throughout. Python is used to facilitate the success of beginning students in using and mastering data structures and algorithms.
