Mathematical Algorithms for the Day Before Your Coding Interview Ue Kiao,Aditya Chatterjee,2020-05-31 Mathematical Algorithms are fundamentally important as several real life problems can be modeled as a Mathematical problem Solving such problems require mathematical insights These problems are a fundamental part of

Interviews as it illustrates the thinking process of the candidate clearly By going through the problems in this book you will be well prepared to tackle any Mathematical problem Following are some of the problems we have explored which involve ideas to solve a wider range of problems Smallest number with multiples This is a unique problem where we learn key insights regarding Prime factorization role of primes in multiples and much more We improve the time complexity of this problem starting from $O(N^3 \log N)$ to $O(N \log N \log N)$ to $O(N \log \log N)$ Largest palindrome In this problem we have reduced 810000 comparisons to 362 comparisons based on three deep insights This is a dramatic improvement and demonstrates that even if time complexity cannot be improved the performance can be improved significantly GCD of sub parts This problem brings up key insights involving GCD a common and important topic and in the process we have explored several standard algorithms like Euclidean's GCD Algorithm in the path of developing our custom algorithm for the given problem Next Permutation This problem demonstrates a significant improvement from $O(N \times N \times \log N)$ time to $O(N)$ time complexity Moreover it illustrates that improving time complexity does not necessarily mean increasing space complexity as it reduces space complexity from $O(N \times N)$ to $O(1)$ This brings in idea of Greedy Algorithms to Mathematical Algorithm and in the process we have explored several standard algorithms like Heap's Algorithm With these problems and the thought process to solve them you will be fully prepared This book has been carefully prepared and reviewed by Top programmers and Algorithmic researchers and members of OpenGenus We would like to thank Aditya Chatterjee and Ue Kiao for their expertise in this domain and reviews from professors at The University of Tokyo and Tokyo Institute of Technology Read this book now and ace your upcoming coding interview This is a must read for everyone preparing for Coding Interviews at top companies

String Algorithms for the Day Before Your Coding Interview Ue Kiao,Aditya Chatterjee,2020-05-11 Strings are fundamental data type in real world and developing algorithms to deal with it is an important domain In interviews often string algorithms are most insightful and challenging In this guide for the day before your coding interview we have explored some problems and demonstrated the thought process to solve it starting from the brute force solutions In the process we have covered all fundamental ideas along with applying Dynamic Programming to String algorithms so that you are able to solve all string based problems Some of the problems we have covered are Check substring This is an important fundamental problem where we learn how strings can be handled just like numeric data and algorithms for numeric data can be leveraged Some of the core concepts we explored are string hashing rolling hash and much more Longest common substring This is a core problem as this uses the concepts we gained in the previous problems and an alternative solution is to use Dynamic Programming The core idea is to apply Dynamic Programming over two different string data Longest repeating substring In line with our previous problem we explored how to apply Dynamic Programming for this problem The key distinction is that we are dealing with just 1 string instead of 2 strings as in the previous problem Unlike the previous problem the Dynamic Programming approach is the only optimal solution With these problems and the thought process to solve them you will be fully prepared This book has been carefully prepared and reviewed by Top programmers and Algorithmic researchers and
