## Current situation

- Adaptive video streaming over HTTP is becoming more and more the primary technology for video delivery in the open internet
- Nowadays, there exists a large number of different players/algorithms
- New versions of players are released in a short period
- Most of the players and their rate adaptation algorithms work as a black box
- There is no public, reliable information about the performance of adaptive media players

## Research Goals/Questions

- Study and quantify the quality parameters and metrics using automated testing of media players
- Research and compare the media players behavior under various network scenarios
- Research QoE metrics for the adaptive video streaming

## Motivation

Input →  → Output

## Adaptive HTML5 Players

## Context conditions

The context conditions can be categorized into several areas:

- Access network:** wired, Wi-Fi, mobile 3G/4G/5G
- Network architecture:** content delivery network (CDN), software-defined networking (SDN), information-centric networking (ICN)
- Client device:** desktop, laptop, mobile, TV, set top box, virtual reality (VR)/head-mounted display (HMD)
- Client device condition/state:** in motion, fixed
- Server infrastructure:** single server, direct stream from Internet of Multimedia Things (IoMT) device
- Content characteristics:** live or video on-demand, segment size (e.g., 2s, 4s, 6s or 8s), number of representations (bitrates, resolutions, languages), video codec, content profile

One change in the context condition might have a **big impact** on the player behavior

## Web Management Interface

### Functions

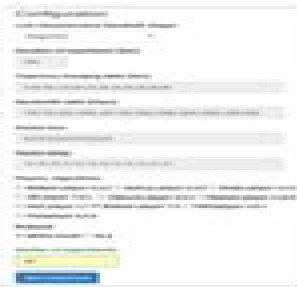

- Configuring and conducting the experiments
- Presenting the player with real-time information about the currently conducted experiment and its parameters

### Customizable items and parameters

- Management of network emulation profiles including the configuration of **bandwidth trajectory**, packet loss, and packet delay
- Specification of the **number of runs** of an experiment
- Selection of the **adaptive media player** and the **adaptive streaming protocol** (MPEG-DASH or HLS)

### Result page

- Providing a list of conducted experiments
- Generating graphs of the results
- Providing various metrics of the conducted experiments
- Exporting the raw values for a further offline analysis

## Quality parameters and metrics

- Download video bitrate (for selected video quality)
- Video buffer length (for video buffer level)
- Video startup time
- Stalls (for buffer underruns)
- Number of quality switches
- Unstability and inefficiency
- Average video bitrate
- QoE metrics:** **GoCrew**, which takes into account the number of stalls, total stalling time, **GoCrew** which depends on video start-up time, stalling frequency and average duration of a stalling event.

$$\text{Unstability} = \frac{\sum_{i=1}^{N-1} |b_{i+1} - b_i|}{\sum_{i=1}^N b_i}$$

$$\text{Inefficiency} = \frac{1}{N} \sum_{i=1}^N \frac{|b_i - W_{i,q}|}{W_{i,q}}$$

- $N$  - the number of measurements
- $W_{i,q}$  - network bandwidth
- $b_{i,q}$  - selected video bitrate

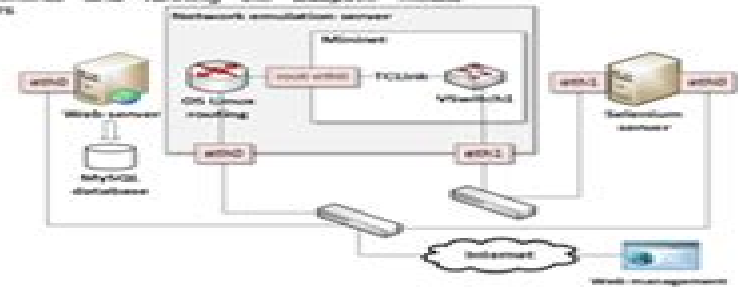

## Adaptive Video Streaming Evaluation Framework

### AdViSE

- Powerful tools to both researchers and practitioners which enable easy and rapid testing of new media player solutions and rate adaptation algorithms under a variety of context conditions

### System Architecture

- Web server** with standard HTTP hosting the segmented video content and **MySQL database**
- Network emulation server** with customized Mininet
- Selenium server** for running adaptive media players on various platforms
- Web management interface** for conducting the experiments and running the adaptive media players

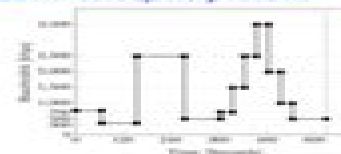

## Experiments

### Original video file characteristics

- Resolution: 3840x2160 (4K)
- Duration: 634 sec.
- Average bitrate: 7498 kbps

### Bandwidth trajectory scheme

The book is about future cities and possible scenarios for city futures A question central to this book is how to face urban challenges while providing and safeguarding positive outcomes concerned with the improvement of the quality of urban life How can future cities be made more liveable sustainable and resilient How can cities continue to provide a wide range of opportunities for all necessities of life To tackle these complex questions the book includes a collection of 25 articles written by 37 emerging voices in urban design and research Together they contribute from a diverse spectrum of interest expertise academic disciplines and practice They approach the built environment from a socio cultural respectively socio economic perspective from the viewpoint of urban policy and public health with environmental concerns for urban sustainability and circularity in mind and through the lens of urban computer and data science providing a take on urban digitalization and

transformation of cities into smart cities Together their contributions reflect the complexity and diversity of challenges and opportunities underpinning future cities Future Cities City Futures intends to be a platform for trans disciplinary urban discourse *SUPERCOMM/ICC '94* ,1994 *Documentation Abstracts* ,1995 **Current Index to Journals in Education** ,1985 **Sociological Abstracts** Leo P. Chall,1977 Index to IEEE Publications Institute of Electrical and Electronics Engineers,1997 Issues for 1973 cover the entire IEEE technical literature User-controlled Adaptive Video Streaming ,2013 We are in the midst of a multimedia communications revolution This revolution has become possible due to the rapid advances being made in the fields of wireless and processor technologies Until a few years ago multimedia technologies were growing at a faster rate than wireless This resulted in a lot of high quality content being generated but the lack of bandwidth to handle such high quality content was a major impediment to content sharing Recent advances in the wireless technologies especially the deployment of Long Term Evolution LTE networks has provided the fillip that was missing thus far Further advances in processor technologies have made the creation and consumption of high quality multimedia content on low power hand held devices like smartphones and tablets ubiquitous The time is ripe to study how to best utilize the available network resources in order to achieve the best possible multimedia communications experience both from the user perspective and from the codec and network utilization perspective Adaptive streaming technologies are becoming ever so popular as a means to achieve this goal In a broadcast multicast setting protocols such as Apple s HTTP Live Streaming HLS Microsoft s Smooth Streaming SS and MPEG s Dynamic Adaptive Streaming over HTTP DASH address this problem Importantly all these protocols are in the public domain The focus of this thesis however is on adaptive streaming techniques for two way telephony applications The motivation for studying two way telephony is due to the renewed interest in this form of communication as evidenced by the popularity of applications such as FaceTime and Skype Currently however there are no equivalents for the HLS SS or DASH for two way telephony Existing solutions are either closed FaceTime proprietary Skype or require access to proprietary vendor solutions for hardware acceleration ooVoo Also these solutions are hidden under the hood and provide the user no control on switching decisions In this thesis we provide a framework for user controlled adaptive two way telephony The proposed framework is software based and furthermore based off of open source software The user can vary the three basic settings of the encoder bit rate frame resolution and frame rate dynamically without having to tear down and recreate the session The user can switch to a higher bit rate or resolution only when needed for example to show a skin lesion and switch back to a lower bit rate otherwise The user can also reduce the frame rate when a high bit rate video is transmitted The outline to dynamically change resolution is also provided An Android application has been developed to demonstrate the proposed scheme As an impressive outcome of our experiments we observed savings in bandwidth consumption as well as improved video quality when demanded *Subjective and Objective Quality-of-experience of Adaptive Video Streaming* Zhengfang Duanmu,2017 With the rapid growth of streaming media

applications there has been a strong demand of Quality of Experience QoE measurement and QoE driven video delivery technologies While the new worldwide standard dynamic adaptive streaming over hypertext transfer protocol DASH provides an inter operable solution to overcome the volatile network conditions its complex characteristic brings new challenges to the objective video QoE measurement models How streaming activities such as stalling and bitrate switching events affect QoE is still an open question and is hardly taken into consideration in the traditionally QoE models More importantly with an increasing number of objective QoE models proposed it is important to evaluate the performance of these algorithms in a comparative setting and analyze the strengths and weaknesses of these methods In this study we build two subject rated streaming video databases The progressive streaming video database is dedicated to investigate the human responses to the combined effect of video compression initial buffering and stalling The adaptive streaming video database is designed to evaluate the performance of adaptive bitrate streaming algorithms and objective QoE models We also provide useful insights on the improvement of adaptive bitrate streaming algorithms Furthermore we propose a novel QoE prediction approach to account for the instantaneous quality degradation due to perceptual video presentation impairment the playback stalling events and the instantaneous interactions between them Twelve QoE algorithms from four categories including signal fidelity based network QoS based application QoS based and hybrid QoE models are assessed in terms of correlation with human perception on the two streaming video databases Experimental results show that the proposed model is in close agreement with subjective opinions and significantly outperforms traditional QoE models
