Computational Grammar Resources for Indo-Iranian Languages, 2011 Grammar of the Persian Language William I Jones, 1828 *A Grammar of the Persian Language* William Jones, 1801 *A grammar of the Persian language* Muḥammad Ibrāhīm, 1841 A Minimalist Approach to Scrambling Simin Karimi, 2008-08-22 This study addresses the problems scrambling languages provide for the existing syntactic theories by analyzing the interaction of semantic and discourse functional factors with syntactic properties of word order in this type of languages and by discussing the implications of this interaction for Universal Grammar Three interrelated goals are carefully followed in this work The first is to analyze the syntactic structure of Persian a language which exhibits free word order With this analysis the author has accounted for the relative order of categorized expressions the motivation for their possible rearrangements and the grammatical results of those reorderings In this respect a broad range of major syntactic phenomena including object shift Case Extended Projection Principle EPP binding and scope interpretation of quantifiers interrogative phrases adverbial phrases and negative elements are examined This monograph is the first major theoretical work ever published on Persian and therefore fills the existing gap by providing insight into the syntactic structure of this language The second goal is to connect these insights to similar linguistic properties in languages in which scrambling occurs e g German Dutch Hindi Russian Japanese and Korean

and to provide a deeper understanding of this group of genetically diverse but typologically related languages The final and principal goal is to situate the results of this work within the framework of the Minimalist Program MP The investigations in this study indicate that scrambling is not an optional rule and that certain principles of MP such as the Minimal Link Condition are only seemingly violated in these languages Furthermore it is shown that careful analysis of scrambling with respect to binding and scope relations and a reanalysis of the properties of A and A movements cast some doubts on the relevance of a typology of movement in natural language
