

The background of the cover is an abstract composition of various shades of blue and white. It features sharp, angular, crystalline shapes that resemble ice or jagged rock formations. These shapes are layered and overlapping, creating a sense of depth and texture. The lighting appears to come from the upper left, casting highlights on the edges of the shapes and creating deep shadows in the recesses. The overall effect is a dynamic and visually striking pattern.

CORNWELL DAVIS (DAVID.), 2022-03-22 Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamma, 2007-11-13 The past 30 years have seen the emergence of a growing desire worldwide to take positive actions to restore and protect the environment from the degrading effects of all forms of pollution air noise solid waste and water Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste exists we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved The principal intention of the Handbook of Environmental Engineering series is to help readers formulate answers to the last two questions The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However realization of the ever increasing complexity and interrelated nature of current

environmental problems makes it imperative that intelligent planning of pollution abatement systems be undertaken
