Composite Structures Of Steel And Concrete Beams Slabs Columns And Frames For Buildings:

Composite Structures of Steel and Concrete Roger P. Johnson, 2018-08-21 This book provides an introduction to the theory and design of composite structures of steel and concrete. Material applicable to both buildings and bridges is included with more detailed information relating to structures for buildings. Throughout the design methods are illustrated by calculations in accordance with the Eurocode for composite structures EN 1994 Part 1.1 General rules and rules for buildings and Part 1.2 Structural fire design and their cross references to ENs 1990 to 1993. The methods are stated and explained so that no reference to Eurocodes is needed. The use of Eurocodes has been required in the UK since 2010 for building and bridge structures that are publicly funded. Their first major revision began in 2015 with the new versions due in the early 2020s. Both authors are involved in the work on Eurocode 4. They explain the expected additions and changes and their effect in the worked examples for a multi storey framed structure for a building including resistance to fire. The book will be of interest to undergraduate and postgraduate students, their lecturers and supervisors and to practising engineers seeking familiarity with composite structures, the Eurocodes and their ongoing revision. R. P. Johnson, 2008-04-15 This book sets out the basic principles of composite construction with reference to beams, slabs, columns and frames and their applications to building structures. It deals with the problems likely to arise in the design of composite members in buildings and relates basic theory to the design approach of Eurocodes 2, 3 and 4. The new edition is based for the first time on the finalised Eurocode for steel concrete composite structures.
