**Conceptual Modeling - ER 2002** Stefano Spaccapietra, Salvatore March, Yahiko Kambayashi, 2003-06-30 For more than 20 years the series of Conceptual Modeling ER conferences has provided a forum for research communities and practitioners to present and change research results and practical experiences in the fields of database design and conceptual modeling Throughout the years the scope of these conferences has extended from database design and specific topics of that area to more universal or refined conceptual modeling organizing originally weak or ill structured information or knowledge in more cultured ways by applying various kinds of principles abstract models and theories for different purposes At the same time many technically oriented approaches have been developed which aim to facilitate the implementation of rather advanced conceptual models Conceptual modeling is based on the process of conceptualization and it is the core of system structuring

as well as justification for information systems development. It supports and facilitates the understanding, explanation, prediction and reasoning on information and knowledge and their manipulation in the systems in addition to understanding and designing the functions of the systems. The conceptualization process aims at constructing concepts relevant for the knowledge and information system in question. Concepts in the human mind and concept descriptions in computerized information systems are quite different things by nature but both should be taken into account in conceptual modeling. Usually concept descriptions are properly observed but concepts in the human mind and their properties are often neglected quite carelessly.
