First Generation Mainframes Stephen H. Kaisler, 2018-11-30 This volume describes several different models of IBM computer systems characterized by different data representations and instruction sets that strongly influenced computer system architecture in the 1950s and early 1960s They focused on a common system architecture that allowed peripherals to be used on different systems albeit with specific adapters These systems were modular which made them easy to manufacture configure and service Computing with UNIVAC they used reliable Williams Tubes for memory and later introduced magnetic core memory IBM developed its own magnetic tape drives and magnetic drums that were both faster and more reliable than UNIVAC s peripherals The first software systems that could reasonably be called operating systems enabled more efficient use of programmer time and system resources The development of programming languages notably FORTRAN and assembly language processors notably Autocoder improved the productivity of programmers In addition IBM developed one of the finest product marketing sales and servicing organizations in the world The legacy of the IBM 700 series is found in their popular successors the IBM 7000 Series which will be described in a forthcoming volume

Empirical Studies of Programmers Curtis R. Cook, Jean C. Scholtz, James C. Spohrer, 1993 This volume looks at the obvious trend in the computing evolution from studies of student programmers and toward studies of real programmers performing real programming tasks The percentage of student and professional programmers in the studies reported in papers presented at ESP 1 and ESP 5 has nearly flip flopped There is now an emphasis on the practical application of the research results both in industry and in academia The papers and posters of this workshop include a range of programming language paradigms beyond the procedural paradigm functional logic visual object oriented and concurrent programming This appears to be an indication of the maturation of the field No longer is it a question of whether to study programmers but more a question of which aspects of the programming that make it an important area of study Microcomputer-based Expert Systems Amar Gupta, Bandreddi Eswara Prasad, 1988 **Artificial Intelligence** George F.
