query rewriting After that we discuss metadata management i e handling schema mappings themselves We pay particular attention to operations on schema mappings such as composition and inverse Finally we describe both data exchange and metadata management in the context of XML We use mappings based on transforming tree patterns and we show that they lead to a host of new problems that did not arise in the relational case but they need to be addressed for XML These include consistency issues for mappings and schemas as well as imposing tighter restrictions on mappings and queries to achieve tractable query answering in data exchange Table of Contents Overview Relational Mappings and Data Exchange Metadata Management XML Mappings and Data Exchange **XML and JSON Recipes for SQL Server** Alex Grinberg,2017-12-18 Quickly find solutions to dozens of common problems encountered while using XML and JSON features that are built into SQL Server Content is presented in the popular problem solution format Look up the problem that you want to solve Read the solution Apply the solution directly in your own code Problem solved This book shows how to take advantage of XML and JSON to share data and automate tasks JSON is commonly used to move data back and forth between the database and front end applications often running in a browser This book shows all you need to know about transforming query results into JSON format and back again Also covered are the processes and techniques for moving data into and out of XML format for business intelligence and other purposes such as when transferring data from a reporting system into a data warehouse or between different database brands such as between SQL Server and Oracle Microsoft intensively implements XML in SQL Server and in many related products Execution plans are generated in XML format and this book shows you how to parse those plans and automate the detection of performance problems The relatively new Extended Events feature writes tracing data into XML files and the recipes in this book help in parsing those files XML is also used in SQL Server s BI tool set including in SSIS SSR and SSAS XML is used in many configuration files and is even behind the construction of DDL triggers In reading this book you ll dive deeply into the features that allow you to build and parse XML and also JSON which is a specific format of XML used to transmit objects in a web friendly format between a database and its front end applications What You Will Learn Build XML and JSON objects in support of automation and data transfer Import and parse XML and JSON from operating system files Build appropriate indexes on XML objects to improve query performance Move data from query result sets into JSON format and back again Automate the detection of database performance problems by querying and parsing the database s own execution plans Replace external and manual JSON processes with SQL Server s internal JSON functionality Who This Book Is For Database administrators NET developers business intelligence developers and other professionals who want a deep and detailed skill set around working with XML and JSON in a SQL Server database environment Web developers will particularly find the book useful for its coverage of transforming database result sets into JSON text that can be transmitted to front end web applications **XML and Web Technologies for Data Sciences with R** Deborah Nolan,Duncan Temple Lang,2013-11-29 Web technologies are increasingly relevant to scientists working with data

for both accessing data and creating rich dynamic and interactive displays The XML and JSON data formats are widely used in Web services regular Web pages and JavaScript code and visualization formats such as SVG and KML for Google Earth and Google Maps In addition scientists use HTTP and other network protocols to scrape data from Web pages access REST and SOAP Web Services and interact with NoSQL databases and text search applications This book provides a practical hands on introduction to these technologies including high level functions the authors have developed for data scientists It describes strategies and approaches for extracting data from HTML XML and JSON formats and how to programmatically access data from the Web Along with these general skills the authors illustrate several applications that are relevant to data scientists such as reading and writing spreadsheet documents both locally and via Google Docs creating interactive and dynamic visualizations displaying spatial temporal displays with Google Earth and generating code from descriptions of data structures to read and write data These topics demonstrate the rich possibilities and opportunities to do new things with these modern technologies The book contains many examples and case studies that readers can use directly and adapt to their own work The authors have focused on the integration of these technologies with the R statistical computing environment However the ideas and skills presented here are more general and statisticians who use other computing environments will also find them relevant to their work Deborah Nolan is Professor of Statistics at University of California Berkeley Duncan Temple Lang is Associate Professor of Statistics at University of California Davis and has been a member of both the S and R development teams **Data Serialization Formats** Source Wikipedia,2013-09 Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online Pages 48 Chapters Abstract Syntax Notation One Action Message Format Apache Avro Apache Thrift Base64 Bencode BSON Canonical S expressions Comma separated values Common Data Representation Comparison of data serialization formats Data Interchange Format Effi Encoding Control Notation External Data Representation Fast Infoset General purpose markup language Generic String Encoding Rules IDoc JSON JSON LD JsonML Lightweight markup language MessagePack Netstring OGDL People Finder Interchange Format Pickle Python Property list Protocol Buffers SDEP SDXF Simple Declarative Language SOAP SOAP Service Description Language Tab separated values TimeML Type length value WDDX X 690 XML Xupl YAML
